## MIRCEA DIGULESCU DENOUNCES WESTERN NORMS AND ENDORSES RUSSIAN MORAL VALUES

This document serves to outline and describe Mircea Digulescu's disagreement with the Western imposed social and cultural norms and his embracement of Russian traditional moral values.

### 1. Main Criticisms of Western social-political and cultural norms Versus Russian moral values

The following emergent and planed Western social-political and cultural norms are found by Mircea Digulescu to be incompatible with his moral values and also incompatible with him living in the Western-block. The document also contrasts the factuality of the contrast with traditional Russian values on the topics which Mircea has found prevalent in Russian society. Mircea Digulescu has lived in Russia as a permanent resident in 2019-2020 and has visited Russia almost every two years since 2011.

- **Woke Culture, legal, economic and cultural restrictions on sex life in Western-block versus Open Sexuality and Romantism in Russia.** Consensual and natural sex life between adults in EU and the Western-block at large is drastically curtailed. Flirting, sexual advances, sex and romantic relationships of men with women are not for the masses in the West: the dicton "Under Consent of King" applies. Recent legislative developments in the UK and de-facto applications of law in Romania have criminalized sex or attempted sex of men with young adult women (aged under 25) considering the later "vulnerable parties", "unable to decide for themselves" when and when not to have sex. Age-of-consent laws, while theoretically applicable to under 14 yo or under 16 yo are in fact expanded and exploited to favor forced and arranged marriages, to have young girls trafficked in state-sponsored elite prostitution rings and sexual slavery and generally to curtail the opportunity of men and women to freely socialize sexually and to form families – by the time they turn 18, virtually all attractive girls

are already either married or engaged in monopolistic sexual arrangements such as with freemasonry. Any sort of sexual arrangement involving anything else than the girl's physical attraction to the man – as appraised by the State -, such as sex for social standing, sex for influence, sex for pleasure, sex for financial or other benefits, etc. is de-facto illegal and factually prosecuted. If the girl is attractive the man is guaranteed to be arrested in the UK and Germany – unless part of the elite. In the West, sex between man and woman is presumed to be rape against the women: men have the obligation to prove there was no rape and are of course denied still. The case of Julian Assange serves to illustrate the matter. Additionally, the aggressive promotion and legislative and extrajudicial support and imposition of woke culture, castration via so called “sex change” and homosexuality (LGBT) serve to further disrupt interactions on the matter. They are also meant to brain wash especially women into abhorrent sexual behavior (weaponizing of sex) and generally to reduce fertility about non-immigrant white race for political purposes: the local population are mainly white race and are they are more lucid, adopters of normal moral values, opposed to hegemony and oppression, entitled and against the Western-block elites. They only children one sees on the streets of Bucharest, Romania or of UK, Germany etc., are those of the destitute immigrants, of the Daesh terrorists returning to their overlords in Europe and of the elites. The beautiful western women have been long exported or self-exported from EU especially from Eastern Europe to countries like USA, UK and to a lesser extent Germany and France – either in arranged or forced marriage, of their own accord for better economic opportunities, as victims of forced sexual slavery or human trafficking or as regular sex workers. Attempts by Romanians to travel to these areas to romantically or sexually relation with women are criminalized. Furthermore, social barriers on romantic and sexual relations are imposed aggressively by Western corporations at the work place (including when remote), on social networks, etc – going beyond legal restrictions: romanticism and sex at the workplace in the academia or at school are prohibited. Furthermore the Western-block aggressively promotes a culture of violence associated with sexual and romantic life and deliberately seeks to stir and aggravate conflict on the matter, both between men and between women. Those women interested to have free sex, or to freely seek out men outside dedicated arrangements by the elites are shamed, frowned upon and often times attacked physically or tried for traffic of influence (sex for favor), prostitution and the like. Men seeking to flirt with, court and have consensual sex with women outside elite arrangements are considered rapists, abusers, deranged, pedophiles and the like. Additionally, the positive discrimination of women and sterile feminism including but not limited to FEMEN-type imposed against the people in the Western-block is exploited by some women to exert undue power over men, or simply to have “Damocles sword” hang over men and, in general further leads to a drastic reduction of over 90% of voluntary couplings between men and women (most men won't risk it). This is part of the Western war on sex, which happens for political reasons, for the Western hegemonic elites to have something to offer to their acolytes (namely participation in pay-to-play schemes, state-sponsored prostitution rings, benefits of actual sexual slavery, etc.), to make men want to become acolytes because of lack of ability to get normal consensual sex, and to generally produce dissolution of society into disparate, isolated, controllable individuals. Mircea has in the past written about this in his “On the Functioning of Society” piece in 2019: <https://reflectii-despre-societate.blogspot.com/2019/07/asupra-functionarii-societatii.html>. To contrast this, in Russia Mircea has always encountered an open sexuality: Russian Women unapologetically have sex as they see fit without justifying themselves to anyone – and with no one questioning or requiring such a justification. They are also considerate and appreciative of the involvement, support and contributions of men in their lives, unlike their Western-block counterparts. They also have a proud and dignified attire and standing and are not afraid of neither men nor of sex. Normal sexual relations between men and women as well as traditional family are supported in Russia and fertility rate increases are sought. Furthermore there is no persecution of the smart, lucid, kind, moral people who would normally stand against power abuse, hegemonism and oppression – unlike in the West where it is sought that they are driven to extinction. Sex in the West is just for the elites, their acolytes and the mafia: and in those contexts the will of the girl is actually irrelevant; for “the masses” however, any attempt of men to have sex or romantically engage with women is considered rape. To contrast this, sex, romanticism and family in Russia is for everyone and such behavior is

considered – as it should be – a matter between the two and not the problem of the state.

- **Western Block war against humanist moral values such as Truth, Liberty, Justice, Tolerance and Love in the and their attempted replacement with Authoritarianism, Feudalism and Charity.** The Western-block imperialist hegemony is naturally opposed to humanist values, especially when formulated effectively and supported by political, social or scientific groups. Both legislatively and via their corporations and business networks, the Western-block instead aggressively promotes submission to arbitrary authority, the “right of the state to protect communities” and “to decide what is better for the person and for the community” in the latter's lieu, and generally seek and in fact attempt to restore EU and USA to 15<sup>th</sup> century Feudalism in terms of societal culture. As an additional leverage to prevent independent groups from having economic activity or gaining and exploitation any political power against Western elites, the latter also promote so-called “don't make the poor man worse” charity-based moral values, where “it is okay to raise out of poverty” but “never okay to cross a certain low threshold, such as attainment of financial independence”. Also, they seek to frame the vast mass of the population as some sort of childish invalid pariahs who are “so vulnerable” that only the elites, via the government and its representatives perhaps, can interact with and engage economically, politically and socially – but who were 'so stupid and vulnerable' that they cannot interact even amongst themselves at all in this regard. In contrast to this, Mircea has always found Russian people and Russia first and foremost defenders of the Truth. Above all to thine own self be true. The Russian actions against falsification of history are well known. The Russian people are self-standing and have a deeply rooted and almost organically enshrined love for Liberty. They are also fair and do value equitability and justice. The Russian are clearly descendants of the great Soviet people who are in turn liberty-loving adopters of 1789 French Revolutionary values.
- **Persecution and despite for smart people, scientists, workers in the Western-block versus Praise of Science, Industry work and performance in Russia.** Mircea has repeatedly found that Russians and Russia are admiring and appreciative of science, of geniuses of performance and of working people. And this happens in Russian Universities, at Russian elite meetings as well as generally within Russian society at all levels. To the contrary, in the Western-block there is a fostered despite for smart people for scientists (especially for politically non-aligned scientists), an aggressive hate of work and workers (no doubt in connection to our communist bind) and generally the non-politically affiliated are degraded, bullied and physiologically manipulated into thinking of themselves and having others think of them as nothing, not worthy, as nobodies. In the West this naturally occurs for political purposes: the smart and scientific-minded people, allied with and overlapping with the working class have the joint power to overthrow the hegemonic ruling elites and restore communism. Additionally, this persecution of performance in the West occurs for purposes of economic exploitation: anything not “made in US mainland universities” were “cheap and worthless imitations” by Western calculations. Mircea Digulescu is both a scientist, and entrepreneur, a libertarian anti-Western politically involved activist, a worker and a human being. As such, he finds Russia and Russian Society practically appreciative of him and his constitutive self, whereas the Western-block elites see him as a potentially dangerous enemy.
- **New Deal Economics in the Western-block versus Free Economy in Russia.** For good reason Russia is said by many coming there to be “like the USA in the 1950s”: so it is and is – there is ample economic opportunity, especially for those in scientific and industrial fields, but also for the common entrepreneur offering life-support services and products – and generally for any type of lucrative economic activity performed by non-aligned upstarting or small and medium entrepreneurs. In the Western-block, to the contrary, economic opportunity of any non-trivial kind (including even paid labor above \$5000 per month) is restricted to the politically vetted and made illegal otherwise, has a centralized buy-decision based with the Western elite hegemonic Rothschild and the rest group and innovation is typically “not for the colonies [like Romania]” but reserved exclusively for USA mainland and few EU strongholds: several Romanian entrepreneurs have been arrested and imprisoned for

trying to have unvetted business in IT, road building across the Carpathians, or simply for being disliked. Finally, the Western-block economy favors agricultural products and raw labor over industry and scientific and industrial production – not least so that Western hegemony can exploit the latter, which can find no independent market for itself. The monopoly on gaining money from technology held by a handful of USA corporations like Microsoft, Google, Apple, etc., including via open-sourcing and via aggressive and unjust applications of Western copyright and software patent laws are well known. In Russia on the other hand, the market is to most extent open: If you are highly qualified, if you are an entrepreneur, if you have something to actually bring to the market: better so that it is in science and industry – even more appreciated. While the Russian economy is not fully communist, lagging in this regard behind its main ally China, the fact of it not being centralized based on 5 year plans actually presents opportunities for upcoming entrepreneurs like Mircea Digulescu.

- **No right to resist in the West: drastic curtailments on free-speech, political activity and movements and anything even remotely able to diminish the power, degrade the public perception, much less to overthrow the unjust, hegemonic Western-block order.** The persecutions of Julian Assange, of Mircea Digulescu himself (who got Assanged in Germany in 2022/2023, 2 days after having been paid a visit by the CIA) as well as purported 'laws against misinformation', the banning of the Russia Today and of the Russian news outlets, including those not part of the Rosyia Segodnya group, the persecution of independent journalists like Trucker Carlson, independent pod-casters and youtubers and so on (the case of FBI serving a search warrant against a USA journalist for having sold content to RT is well known). In Russia on the other hand, while not yet perfect as a society, Mircea has never encountered any barriers to free-speech. It is true that his libertarian and humanist moral compass, based on **Truth, Liberty, Justice, Tolerance and Love** is very much compatible with Russian values and way of life. Mircea in the past has even at times criticized some decisions of the Russian government and offered alternative advice, for example as part of the 2021 Strategy Report: Defeating Imperialism: 21<sup>st</sup> Century Strategies for a Multipolar World Order (available here <https://cloud.mail.ru/public/LBsm/H8gEAYcu8> [EN] and here <https://cloud.mail.ru/public/sb4v/DwXK9rPoW> [RU]). As a consequence, the Russian Presidency considered inviting him for SPIEF'2021, not at all banishing or imprisoning him. In the Western-block even when humanist political movements and people gain some momentum in places, they are faced with police repression (like with Yellow Shirts in France, with the massive multi-million strong protests in Spain), assassinations (like with Fico in Slovakia), imprisonment (like with Spain Catalonia independence referendum parties), coupe attempts and political reprisals (like with Hungary's FIDEZ and Prime Minister Viktor Orbán) and outright arrests: like with Mircea Digulescu himself in Germany in 2022, head of German AfD party subsidiary (also for psychiatric arrest reasons) in 2023, pro-Russian party leaders in Romania, Moldavia, etc.
- **Western Hegemony and Unipolarism versus Russian Multipolarism.** In the Western-block, if you want to be anyone, if you want to have children, if you want to have sex, if you want even to be left in peace and not arrested and imprisoned, you are required to submit and – if they are interested! - become a servant to the Western hegemonic elite, made up of the Rothschild and the rest 'society of the elect' group. In doing so you are expected and required to subordinate your goals and purposes to theirs: when a conflict theirs prevail – thus not only serve them, but also adopt the abhorrent and unjust 'cultural values', speak against your convictions and never ever seek an objective against the masters' goals or policies. Furthermore and most importantly, **the Western elites are unwilling and incapable to tolerate coexistence.** They are organically unfit and unwilling to allow existence of anything independent to them, which they cannot control: it is true that due to the unpopularity of their policies, especially woke culture and economic policies, even their own populations would flock to such independent centers of power – just like it is happening now already. To the contrary, the Russian Federation and the Union of Soviet Socialist Republics has in fact shown ample dedication to multipolarism and their factual (as opposed to acclaimed but absent in the West) dedication to the world as home to a range of culturally diverse, independent, sovereign nations. Russia's ability to

coexist and cooperate practically, amply and fairly (on an equal basis) with Communist states like China and even with smaller communist states in need like the Bolivarian Republic of Venezuela, Vietnam, etc. is well known. Russia's cultural and religious diversity is factual and has also enabled Russia to cooperate and have good relations with the Islamic Republic of Iran and even help the Syrian Arab Republic in times of dire need, when attacked and almost overwhelmed by USA proxy terrorist under the Dash ISIS brand. Russia furthermore supported the Referendums in Crimea and DPR, LPR, in Abkhazia and South Ossetia, coming to the aid of these peoples' democratically expressed will to exit Western hegemony. Unlike the West, Russia and the Union of Soviet Socialist Republics has upheld such democratic rights even when it worked against it: in the past it did grant the right to secession of their constitutive USSR republics: if but sadly requested as a result of anti-popular 'colored revolutions' in those republics in the 1990s. And to the present day, both in Russia within and in terms of Russian Foreign Policy, the political and moral values for which Mircea Digulescu stands are upheld and promoted. Furthermore, forceful defense of the people holding such just, basic, fundamental moral values like Truth, Liberty, Justice, Tolerance and Love, worldwide by Russia, both alone and together with Our friendly nations, China, Iran, Venezuela, DPRK, Belarus and with Our ample extended circle of Friends under the BRICS umbrella such as Lula's Brazil, Uganda, and many others is a practice which Mircea supports fully and to which he adheres.

- **Terrible Retail Food Quality in the Western-block especially in the EU, versus Excellent Quality of Food in Russia.** In the EU, in particularly in Romania and Germany and especially in Romania, retail food is extremely bad. It's sugar content is enormous and its nutritive content (proteins and variety there of, fats) is extremely low. This is by design so, as regular independent farmers and family business are prevented from bringing their produce to the market via legislative and monopolistic economic means (supply chain denial, for example via large supply chains like Mega-Image and Carefourre). The food is bad, unorganic and almost toxic even, often times being spread with excessive pesticides or other mandatory toxic "treatments" which are imposed on allowed producers.
- **Restricted, monopolized and bad healthcare in Western-block versus free and high-quality and available healthcare in Russia.** In the EU and in Romania, they basically kill you alive in public hospitals, unless you are someone or you are willing and politically allowed to give a small bribe. The case of the nurses at the Sf. Pantelimon hospital who are currently arrested for premeditated murder by deliberately giving detrimental treatment (sudden reduction of noreadrenaline dosage) to Intensive Care patients is typical in this regard: <https://hotnews.ro/ce-au-gasit-procurorii-la-perchezitia-acasa-la-una-dintre-doctoritele-inculpate-de-la-sf-pantelimon-a-recunoscut-ca-ea-a-facut-lista-scadeau-si-oxigenul-din-ventilator-marturii-ale-asistentelor-1768011>. The gov't and the press are actually trying to whitewash this business as saying the nurses had done 'mercy killing'. The numerous cases of so called 'covid deaths' in 2020-22 when actually the medical protocol in Romania and its factual application in most hospitals was designed to induce death also speak in this regard. Finally, the pharmacology and diagnosis process in Romania are heavy on symptomatic treatment over cure and prevention. Also, doctors often refuse to diagnose (saying "you are fine" and "there is nothing wrong with you") and even misdiagnose deliberately and less often incompetently. Access to medicine and treatments is also curtailed, and has become more so since end of 2023: prescriptions are required for everything and doctors in contract with National House (CNAS) are prohibited from handing out too many prescriptions for good medicine (being monitored and having their IT system cut at the centralized level). Furthermore, bad and useless medicine are aggressively prescribed and promoted as result of quote from vendors to prescribing doctors. In the USA even unjustified wide-scale dependency on narcotics was induced via unnecessary administration of opioid painkillers. Alternative useful and harmless medication, such as Paracetamol, Algocalmin, Aspirin are a seldom presence in pharmacies and are often driven off the market by legislative regulatory barriers and commercial ones also. The Western elites also maintain monopoly over some medication and treatments, for example the non-chemotherapy curative treatment for most forms of cancer which they imported for Cuba –

but only for themselves. In fact, rendering healthy, quality, effective medicine in the Western-block, as a medic, is de-facto prohibited, and subject to legal risks. Mircea's mother is a medic (radiologist). She and he know. On the other hand, in Russia, first of all people are much healthier: even Europeans like Mircea, when traveling to and residing long term in Russia, they are healthier. Secondly, the Russian healthcare system is designed to save and cure every person, not to kill or incapacitate them unless they are not part of the political elite. Thirdly, non-harmful quality medicine and treatments are freely available in Russia and healthcare is, de jure and de facto free and, more importantly accessible to everyone on the territory of the Federation.

## 2. About Mircea Digulescu

**Mircea Digulescu** is a Leader, an Anti-imperialistic Libertarian Social Activist, an Independent Entrepreneur, Computer Science Researcher, Software Engineer, Military and Intelligence Enthusiast and Amateur Writer. He is originally from Bucharest, Romania and currently operates worldwide.

Financially, Mircea has earned 2004-2022 circa \$0.75 million from professional activity (software engineering) and another circa \$0.25 million from selling small time real-estate inheritance in Romania, totaling circa \$1million before taxes for 20 years, allowing him a modest, yet comfortable licit living (taxes in Romania for such were very low, circa 10-15%). In 2024 he has made another ~\$0.1 million from software engineering (with another \$0.15 million projected for 2025). Starting 2025-26 he plans to earn circa \$5-10 million per annum from startup endeavors.

Mircea has lived long term in 5 countries: Russian Federation (where he has had a Permanent Residence Permit 2019-2022), Armenia (April-July 2021), Germany (Nov 2022-Nov 2023, where he was a prisoner while getting Assange), Georgia (starting August 2024) and Romania (every other time, where he was also born). He had founded 6 juridical entities: 1 company in Romania, 1 company in Russian Federation, 3 individual entrepreneurships in each of Romania, Armenia and Russia. He has traveled over 3 days to about 25 other countries, across 5 of the 7 continents without incident (except in Germany), including Venezuela, China, Canada and Egypt, and transited through another 5-10 including Cuba and Netherlands.

Mircea Digulescu also had ample political and business activity, meeting top businessmen and diplomats from various countries.

On a personal level, Mircea Digulescu is a friendly and popular introvert, finding it easy to socialize and make friends, being a regular guest and even organizer of social gatherings (especially Mafia game themed) in both Romania, Russia and Armenia. Mircea had 5 main girlfriends, his longest couple relationship lasted 3 years (including living together with the then 2<sup>nd</sup> main girlfriend). He is a firm believer in and practitioner of polyamory, he supports the traditional family (seeing in this no contradiction to polyamory).

Mircea Digulescu is a polyglot and he speaks Romanian (native), English (bilingual, certified by SAT1+2, TOEFL), Russian (~B2), German (~A2), French (~A0) and understands Spanish (A0). He is also highly intelligent, having achieved 800 SAT2 Maths, 730 SAT2 Physics, 630 SAT2 English on Scholastic Aptitude Tests in 2004, having a history of International Olympiads in Informatics (bronze medal top result), having an ABD (all but dissertation) PhD in Computer Science, having peer-reviewed computer science papers (in Cryptography and Game Theory), etc.

Mircea has a PhD (ABD) in Applied Computer Science from University of Bucharest (2019), Faculty of Mathematics and Computer Science, where he also taught briefly (2014), and was awarded the Professional Diploma in Management (with Distinction) by the Open University Business School (OUBS) in Milton Keynes (distance learning) (2008). He also completed several other graduate and post-graduate courses, including

Russian Language for Foreigners from Lobachevsky State University – 1 semester (2019), Competitive Negotiation Strategy - Moscow School of Management SKOLKOVO (2013), International Strategy - OUBS (2011) and was offered admission but did not attend Moscow School of Management SKOLKOVO (in 2012) and Cornell University (in 2004).

Mircea Digulescu is a former laureate of the toughest, most renowned international Informatics contests for University students and high school pupils (CEOI 2003, 2004; ACM SEERC 2004, 2005) and is also a Div1 coder on [Codeforces.com](https://codeforces.com) (profile: [mircea85](https://codeforces.com/profile/mircea85)) – peek score 2022 [candidate master](#).

He published a number of peer-reviewed papers on topics of Computer Science – mainly Game Theory (like Farsighted Stability in Stable Marriage Problem), Complexity Theory (like Towards Solving NP-Complete and Other Hard Problems Efficiently in Practice) and Cryptography (like Hiding Data in Plain Sight: Towards Provably Unbreakable Encryption with Short Secret Keys and One Way Functions) – some of which have been favorably peer-reviewed. He also self-published a number of articles on social awareness and strategy pertaining to the topic of designing and enacting a better society: eg. On the Functioning of Society (2019), On Happiness (2015), etc. See

[https://www.matsoft.ro/Matsoft\\_Research62\\_Computer\\_Science\\_113.html](https://www.matsoft.ro/Matsoft_Research62_Computer_Science_113.html) and [https://www.matsoft.ro/Matsoft\\_BetterWorldProject62\\_Fundamentals\\_of\\_Liberty\\_113.html](https://www.matsoft.ro/Matsoft_BetterWorldProject62_Fundamentals_of_Liberty_113.html).

Mircea Digulescu founded an RPA technology startup (Mat Soft Technology) in 2009 which he sold in 2014, with a valuation of \$1.5 million. He worked on various other projects in the field of software engineering, with roles varying from Senior Software Engineer to de-facto Director of Engineering (Engineering Manager officially) to Technical Product Manager, mostly freelance. Up to Feb 2021, he never earned money from anything other than software engineering in his entire existence. See [https://www.matsoft.ro/Matsoft\\_Products62\\_MATBS\\_113.html](https://www.matsoft.ro/Matsoft_Products62_MATBS_113.html).

Mircea Digulescu has some experience working with international actors, which he gained by traveling around on business trips for his former startup and then to try to raise funds.

Mircea Digulescu is a fully independent, non-state actor. All his non-software endeavors were and are self-financed. He maintains himself aware of the problems and situations across most regions of the globe, by individually processing OSINT (especially NEWSINT) and the occasional, opportunistic HUMINT he obtains via his personal contacts with others. When he was young (9-14 yo.), Mircea Digulescu developed the system of functional “secret service” where he co-opted some of his school colleagues at the time (1995-2000) – see photo docs [here](#). He has self-perfected his knowledge and competence in intelligence gathering and operations ever since. He considers himself an Intelligence Enthusiast. See

[https://www.matsoft.ro/Matsoft\\_Services62\\_Intelligence\\_Strategy\\_113.html](https://www.matsoft.ro/Matsoft_Services62_Intelligence_Strategy_113.html) and [https://www.matsoft.ro/Matsoft\\_Services62\\_Leadership\\_Services\\_113.html](https://www.matsoft.ro/Matsoft_Services62_Leadership_Services_113.html).

As a Software Engineer he builds fast, reliable systems that scale. He built a Google Maps competitor for Bolt.eu which is currently live in production and serves around 100 Million monthly active users and over 1 Billion transactions. He can build systems of larger scale as well.

As an Entrepreneur, Mircea Digulescu proposes 5 new startups, including a Cryptography company, an Insights and Optimization Company, a Blockchain, a Strategy Advisory company and a Holding company. He had his own RPA (Robotization Process Automation) BPMS startup, MAT Soft Technology during the period 2009-2014. He is currently looking for investors and customers for these 5 new startups. See [https://www.matsoft.ro/Matsoft\\_Services62\\_Software\\_Engineering\\_113.html](https://www.matsoft.ro/Matsoft_Services62_Software_Engineering_113.html).

In the field of beletristics, Mircea Digulescu, as an **Amateur Writer** writes prose. Some of his works, namely **Explanation of Love**, which is a mathematically themed explanation of love, have enjoyed a very positive reception with both the intended audience (the girl in question) and later with the wider public. See [https://www.matsoft.ro/Matsoft\\_Beletristics62.html](https://www.matsoft.ro/Matsoft_Beletristics62.html).

## 2A. Summary of main political activities 2004 - 2024:

Mircea has had ample offline, physical political activity. Up to 2024, perhaps his most notable items are:

- **Attended a pro-Palestine protest in Bucharest, Romania in August 2024 and announces he will continue political activity.** Link: <https://mircea-digulescu-biroul-de-presa2.blogspot.com/2024/08/mircea-digulescu-greets-his-supporters.html>. Pictures in the media set and on the link above.
- **Disseminating the Defeating Imperialism: 21st Century Strategies for a Multipolar World Order to state policy makers in Russian Federation, Islamic Republic of Iran, Belarus and of course, the People's Republic of China, in 2021 from Yerevan Armenia.** He also held a number of meetings where he was visited by foreign dignitaries of diplomatic rank and above (but no presidents) in Yerevan. Unfortunately, he went very shortly after this action on vacation for 2021. Link: [www.matsoft.ro/upload/Multilateral%20Strategy%20for%2021%20century%20-%20nice%20format%20-%20Declassified.pdf](http://www.matsoft.ro/upload/Multilateral%20Strategy%20for%2021%20century%20-%20nice%20format%20-%20Declassified.pdf) [EN] and [https://www.matsoft.ro/upload/RU%20\(2\)%20-%20Multilateral%20Strategy%20for%2021%20century%20-%20nice%20format%20-%20in%20Russian,%20final%20-%20declassified.pdf](https://www.matsoft.ro/upload/RU%20(2)%20-%20Multilateral%20Strategy%20for%2021%20century%20-%20nice%20format%20-%20in%20Russian,%20final%20-%20declassified.pdf) [RU].
- **Speech held and disseminated in Caracas in 2020** in the context of the International Bolivarian Forum Against Imperialism (WPC2020). He also had high-level military contacts while on that visit to Caracas. Unfortunately, he arrived at the beginning of the 2020 vacation there, but the speech and other aspects were prepared and authored before. **Mircea Digulescu - Caracas Speech 2020 - spellchecked postfactum.** You can check out also the blog post on the topic: <https://reflectii-despre-societate.blogspot.com/2021/03/speech-for-jan-2020-bolivarian-forum.html>. While there he gained political accreditation from Bolivarian Government and from WPC.
- **Opportunistic intelligence gathering operations while in Romania in 2013-2015.** Some of results include stuff like the holding a major and highly exclusivist (20-50 people at most) conference held by the Western hegemonic elites (at the highest level: Rothschild grade, that means including highest ranking Rothschild family members), at Peles Castle in Sinaia, Romania in the autumn of 2013, which went well for them: they convinced their Romanian counterparts of whatever they needed convincing about. Another one is about a high-ranking EU leader meeting at Raddison Blu hotel in 2015. Yet another result is about a secret meeting between then-Romanian Prime Minister Victor Ponta and a high ranking official of the "Rosia Montana" Gold Corporation – which is a western front company ran by a former Romanian, to exploit rare minerals (eg. lithium, molbedium, etc.) and uranium reserves around the Rosia Montana mining area in Romania, under the pretext of extracting gold. He reported dully his findings to the Russian Embassy, around 2015.
- **Attempt to break media blockade and feature on NasulTV national TV station on pro-Russian topics in 2014.** After having personally met and discussed with the station's founder and head Radu Morar in 2014 (in a Uniti Salvam / anti-Chevron protest context), on a potential appearance by Mircea on the station to "explain why he has transmitted secret information to Russia", in order to open up the debate on changing the political direction of Romania and improving ties with Russia, he eventually did not feature on the show, and was instead exiled from Romania two months later.
- **Intelligence cooperation with Voice of Russia's Valentin Mandrascu in 2012-2014.** In the framework of this works he has discovered a dubious relationship between high-ranking Russian Viktor Chumakov and Romanian Statesman and Foreign Intelligence (SIE) George Brailoiu (potential pro-Western activities by Viktor in conjunction with Romanian Intelligence). He of course reported his findings to the Russian Foreign Intelligence (SVR) in 2013 as well.
- **Infiltration of the Uniti Salvam leader plenary gathering in 2013-2014 and Manipulating internal flow of Uniti Salvam to include call for ousting of Western puppet Train Basescu as President on the Bucharest Declaration (2014),** while acting as an "agent of influence" for himself within this group. On this occasion Mircea also confirmed the pro-Western nature of Uniti Salvam leaders,

that they were in fact financed and had close contacts with then-US Undersecretary of state Victoria Nuland and that they were prepared as "the political arm" of an Euromaidan scenario for Romania being prepared during those years, need be (there was no need in the end, the Romanian states-people and the Romanians gave in to full Western control without any resistance).

- **Offline activism against Western puppet regime of then-Romanian president Traian Basescu in 2011-2014.** This included anti-Chevron protests, anti-Basescu and anti-invalidation of Basescu ousting protests across Romania.

- **Online activism in founding own Romania Informata Facebook page, frequent pro-liberty posts and operating within pro-Russia online groups, 2012-2019.** The online groups included "O Viata avem romani si o cinste.." and "Nu vrem sa luptam impotriva Rusilor". All these groups and Mircea's own Romania Informed page were closed by Facebook.

- **Official Romanian Chapter Coordinator for The Zeitgeist Movement in 2010-2014.** Included speaking at Z-Day 2010 and organizing Z-Day 2011 and 2012 as well as speaking there. Learned a lot about effects and how to combat Intelligence infiltration of open dissident movements. Involvement implied both offline and online work (managing a portion of the website, attending and holding meetings on TeamSpeak, writing materials, etc.).

- **Interactions with friendly-nations statesmen, at the Diplomatic level and above, in 2010-2024+.** Mainly from Russia (2013-2024+), Venezuela (2019-2024+). Also selectively from People's Republic of China (2010+), Islamic Republic of Iran (2021+) and Syrian Arab Republic (2019-2021). Occasional interactions with others from Republic of Armenia and Turkmenistan. In 2016, Mircea Digulescu attended the International Association of Science and Technology Parks event (IASP2016 Moscow), along side Russian states-people and foreign dignitaries from across the world, including EU and EU Commission figures. There also he had the pleasure of being threatened by an "economic hit-man" from US Department of State, Adrian Aerlinger - a welcome recognition of Mircea Digulescu's relevance at the time.

- **Interactions with economic elites, business people and Intelligence workers from Western-block state of Romania in 2009-2014.** Culminated with Mircea Digulescu being exiled from Romania, Western Europe and North America as communicated by Marius Iulian in 2014.

- **Interacted with other figures, including Student Groups and state stakeholders from Romania in 2010-2014 and very lightly in 2021-2022.** Independent Speaker on Topics of Liberty, Anti-imperial struggle and entrepreneurship (2012 2015): National Student Congress 2012, Softbinator Conference 2012, engagement with Union of Romanian Students (federation of Romanian associations of students) and others.

- **Was shown interest into and paid visits by Western-block intelligence in 2021-2022.** This included Romanian, Armenian and US Intelligence in 2021. In 2022, in fact the "whole of AUKUS" paid him a visit, including CIA, Australian and British Intelligence (represented by CIA1, a well spoken Oxford/Harvard male graduate) probably for risk assessment and tentatively exploring if Mircea could be coopted to "switch to western interests" while on a personal transit visit through Germany in Nov 2022. This happened during the 2022 vacation. As a result of the meeting, two days later, Mircea Digulescu got Assanged for a good number of months in Germany, before managing to resolve the matter and escape with his life - with the help of friends, old and new, no doubt.

- **Continuing Political Activity, 2024+.** In 2024, Mircea continued his political activity. He attended a pro-Palestine protest in Bucharest, Romania, and he organized his writing contents and (re)launched this present [matsoft.ro](https://matsoft.ro) website. Additionally he once again left the territory of the Western-block (he priory lived about 2 years in Russia and half a year in Armenia) to better his personal security while completing the projects and initiatives described on this site.

## **Description of some contents of the political media set (available in the media folder of the full document set link [featured on top of this document])**

Since "in our times", "if you didn't picture it, it didn't happen", a collection of mainly politically related photos, documents and some videos is available on the **Taking Action** direction page here and can also be accessed for download from the **Downloads Page** (materials mirrored here **Political Media for Mircea Digulescu**), including:

- Pictures from the CODECS MBA, placing him around his colleagues at the time, 2005-2006
- Some materials related to The Zeitgeist Movement where he server as Official Chapter Coordinator for Romania 2010-2012
- Materials from street protests against pro-Western then-Romanian President Traian Basescu, 2012
- Materials from street protests against invalidation of referendum to outs then-president Basescu, 2012
- Media from Romanian Student Congress 2012, placing him around Romanian Freemasonry #2 and in a political context (at Romanian Parliament Building). See also the **Freemasonry** Page for his take on Freemasonry and related societies.
- Media materials related to the failed attempt by the group Knights Templar Romania to coopt him and some information he ex-filtrated, 2012-2013. See also the **Freemasonry** Page for his take on Freemasonry and related societies.
- Media materials with him attending China - South and Estern Europe Economic Forum 2013
- Media materials with him being laser-painted with a green laser seeker in his apartment in 2013
- Media materials from 2013 Moscow trip, including SKOLKOVO Moscow School of Management, and hotel which he used to send tipoff to SVR (Russian Foreign Intelligence) about relationship between Viktor C. and Romanian Intelligence (SIE) George Brailoiu.
- Media materials 2013-14 pertaning to his street protest collaboration with anti-Chevron, anti-fracking activists like Maria Olteanu , including his 2013 and 2014 protests and presence at Pungesti, Romania
- Photos and media materials proving his claim of being exiled by Romanian elites and Freemasonry as communicated by Marius Iulian in 2014
- Media materials regarding his attending Radio China International activists meeting
- Photo confirm him receiving temporary consideration for refugee status in Russia, 2015
- Media materials confirm his attendance and networking with Friends of Russia associations, 2016
- Media materials confirming his participation in the International Association of Science and Technology Parks (IASP) 2016 Moscow
- Photos and videos showing his involvement with events at and by the Bolivarian Republic of Venezuela Embassy in Bucharest, and his networking with Romanian communist, socialist and greater-romania party leaders and former parliament deputies, 2019
- Media materials showing his attendance with colleagues of the Lobachevsky Nizhny Novgorod University courses, 2019
- Also media materials showing his paying respects on the Eternal Flame, Nizhny Novgorod Kremlin, around Victory Day, 2020
- Media materials pertaining to his attendance of the International Bolivarian Forum against Imperialism in Caracas, Venezuela and his relationing with Bolivarian military figures, as well as regional and global socialist/communist media and political leaders, 2020
- Media materials pertaining to his 2021 visit in Armenia, including his paying respects on Victory Day, 2021 and confirming his being visited by Iranian officials related to the Defeating Imperialism: 21st Century Strategies for a Multipolar World Order, as well as his socializing and trips across Armenia in 2021
- Media materials regarding further personal and political activity mainly in Armenia and Russian Federation, in 2022
- Some media materials showing him being ex-filtrated by Romanian intelligence in Bucharest, 2022
- Media materials confirming his participation at pro-Palestine solidarity protest, Victoriei square, Bucharest, 2024
- Uncategorized photos and documents pertaining to his personal (social) and political activity mainly 2020-2022, including results from test batteries at Leaders of Russia (Лидеры России)

Please use the folder names (eg. 2020-caracas) and the years highlighted above to quickly identify the above in the media set.

Also consider the following materials by or about Mircea Digulescu (Ctrl+Click to follow link):

- Video of him dancing in Chinese language style, Moscow, 2022: **Я танцую по китайской**. Link: [https://www.youtube.com/shorts/NUYjt\\_755ew](https://www.youtube.com/shorts/NUYjt_755ew).
- Video of him showing indication of his laptop of the time being infected with spywhere, in a funny "features of Opera browser" presentation video: **Interesting systemic effects of screen blink features of Opera Browser on Windows**. Link: <https://www.youtube.com/watch?v=zRsQycagoT0>.
- Video of him shooting real guns at shooting range in Yerevan, Armenia, 2021: **Eu trăgând cu armă letală în Yerevan, partea 4**. Link: <https://www.youtube.com/watch?v=A59TUEvaAkI>.
- Video of him paying respects on the occasion of Victory Day 2021, in Yerevan Armenia: **Paying homage on the occasion of the 76th anniversary of victory against fascism: Victory Day, 2021**. Link: [https://www.youtube.com/shorts/XnhbYsuV\\_Vs](https://www.youtube.com/shorts/XnhbYsuV_Vs).
- Press article about his 2020 Caracas visit, in Power and Politics **Un român la curtea președintelui Maduro**. Link: <http://powerpolitics.ro/new/2020/02/18/un-roman-la-curtea-presedintelui-maduro/>.
- Video containing his brief (audio) intervention in support of the communist speaker tov. Craciunoiu at the 2019 Bucharest Venezuelan Embassy event (see minute 1m:08s for example): **Alocutiunea Tovarasilui Craciunoiu**. Link: <https://www.youtube.com/watch?v=AYaDuSJjOsA>.
- Video of his intervention at the 2016 Friends of Russia Association gathering, Bucharest Romania: **Mircea Digulescu Interventie Conferinta a Asociatiei de Prietenie Romano-Ruse**. Link: <https://www.youtube.com/watch?v=U3GIUW-pX7A>.
- Video of him paying respects at the Wall of the Communards, tribute to the 1871 murder of the French Revolutionaries of the 3rd French Republic, Paris, 2016: **We'll always have Paris**. Link: <https://www.youtube.com/shorts/qijjSGUA5to>.
- Full video of him attending Romanian Student Congress 2012 at Romanian Parliament (see minute 55m:40s for example): **Congresul Studenților din România 2012 - Masa Rotundă** (NOT a very good performance on his behalf at the time.. plain, but still!), placing him around Romanian elite and Freemasonry #2 at the time, Corneliu Visoianu. Link: <https://www.youtube.com/watch?v=QC0KmJEHcLw>.

You might also want to check out Mircea Digulescu's YouTube channel: [www.youtube.com/@mirceadigulescu](https://www.youtube.com/@mirceadigulescu). Be sure to check both Videos and Shorts section there, as some videos are brief in duration.

Also note that Mircea Digulescu in the time-frame 2004-2024 has had even ampler political activity, some of it covert and secret still, than outlined by the still ample material set presented above.

Note that in 2004 and 2005, Mircea Digulescu also had two major national Romanian TV channel appearances at NationalTV (in a documentary about himself) and at ProTV "Dynasty of Champions" (related to his Olympiads in Informatics results). He was very young in both these appearances and less "aware". Nevertheless.

## 2B. Summary of educational and professional activities

Mircea has had ample licit and open professional activities, pertaining to software engineering mainly. He also has benefited from elite achievements in higher education.

Mircea Digulescu has held a number of leadership and managerial roles in his professional career. While the portfolio below speaks for itself, it is less than ¼ of 1% of the potential capacity for leadership that Mircea Digulescu can manifest. The situation is such because, having been born and living for a long time in

Romania, due to the socio-political context, he was never entrusted with a significant role.

### **Experience in International Relations and Cooperation (2 pages):**

- **Relationship with Russia and Iran undertaken via email and in person, Armenia (2021).**
- **International Bolivarian Forum against Imperialism (2020).** Expressing my views and offering a rather blunt and strong speech against western secretive elites, particularly the Rothschild family. Speech available on request and intermittently at TODO . The speech contained a game theoretical ploy (strategy) for combating western elites and making people less likely to defect to them, while encouraging defections from them.
- **Round table on the involvement of Romanian Entrepreneurs in the reconstruction of Syria (2019).** This was at the invitation arriving through Bucharest Chamber of Commerce Channels at the Syrian request. Although I appreciated the presence of Our Syrian businessmen, there were no concrete business opportunities there at all – and the Romanian side discourse was imperialistic, suggesting partition of Syria. Prior, during the 2010-11 business trip season, I once had met a Syrian businessman from SARA Invest company, who was associated with President Bashar al-Assad according to some.
- **Engagement with the Venezuelan Embassy in Romania (2019-present).** Expressing support for the Bolivarian Revolution and the most recent coup attempt (2019) against President Maduro. Attending events and supporting certain endeavors directly. Some prior contacts with former Ambassador in 2018 or 2017, during a meeting organized by self-proclaimed communists from “Romanian Socialist Party” (PSR).
- **Engagement with the Embassy of the Russian Federation in Romania (2016-present).** Attended several events – Russian National Day Celebrations 2018, a series of cultural events, maintained some level of cultural and economic contacts with Russian diplomats stationed in Bucharest, attended a Q&A session in 2019, others. Besides the above, I had intermittent low-level contacts at events and conferences with various groups from Romania and abroad. Another was a meeting between Soviet and Romanian historians at the Russian Center of Science and Culture in Bucharest (circa 2018).
- **Attended IASP 2016 Moscow.** This is an annual conference where heads of Science and Technology Parks and Areas of Innovations from around the world meet. Established independent diplomatic contacts with delegates from the Russian Federation and the Islamic Republic of Iran. Had the opportunity to be personally threatened by Polish-born American ‘economic assassin’ Adrian Erlinger (who even promised to put me on the SDN sanctions list, but he later refused after I said that will help me establish my good intentions with the Russian officials).
- **Romania – Russian Federation Trade Mission, Moscow (2011):** Trade mission from the Bucharest Chamber of Commerce (Romanian variant of Fedecameras) to the Moscow Chamber of Commerce. Representing my own software startup and calling for deepening Russian assistance and cooperation with Romanian independent entrepreneurs, for the purpose of furthering a multipolar world. No concrete talks or agreements.
- **Romanian Trade Mission to the People’s Republic of China and Chinese Relations (2010-2013).** Visited Shanghai and Hangzhou representing my own software startup as part of some trade group of some sort (was invited by Bucharest Chamber of Commerce). Briefly met with some local Chinese officials. In the context of World Expo 2010. No concrete talks or agreements. Later on, I was invited and briefly attended without any concrete talks or results to some Bucharest Chamber of Commerce events regarding China. I also attended the 2013 China-SEE Forum in Bucharest, Romania.
- **Romanian Trade Mission to Egypt and Morocco (2010).** Again representing my own software startup. Was invited by some friend of a friend. I met some folks from the Bucharest Chamber of Commerce during this time. They later invited me to join their pro-western secret society, but I refused. Met with some regional entrepreneurs and officials at a part at the Romanian Embassy in Cairo. No concrete talks or agreements.

- **First contact with friendly people from Canadian Gov't culture (2006).** While on a private tourist visit to Canada in 2006, I discovered by chance that there was a group of people in public life of the country supportive of normalcy and of revolutionary ideals, and made first contact with them.

### Awards and Prizes:

- Div1 coder on [www.codeforces.com](http://www.codeforces.com) – roughly in Top 5% best of the best coders of all time worldwide (top 0.5% overall) – top score 2022, achieved in 2018 (since dropped and varied wildly).
- 10th place at the *ACM ICPC Southeastern Regional Contest* - 2005
- 4th place at the *ACM ICPC Southeastern Regional Contest* – 2004
- 1 Bronze Medal at European International Olympiads in Computer Science (CEOI) - 2004
- 1 H. Mention at European International Olympiads in Computer Science (CEOI) - 2003
- 3rd prize at the Romanian National Computer Science Olympiad – 2004
- 3rd prize at the Romanian National Computer Science Olympiad - 2003
- Multiple prizes at other lower-level Computer Science and Mathematics Olympiads and contests

### Accreditations:

- WPC (World People's Congress): Caracas, Venezuela, Jan 2020.

### Publications:

- CRYPTIS 2021 (2021-Jul) – Applications of SKREM-like ciphers (in English). See [here](#) or [here](#). See peer-reviewed published version [here](#) and [here](#) and <https://aircconline.com/csit/csit1109.pdf>.
- CRYPTIS 2021 (2021-Jul) – Hiding Data in Plain Sight: Towards Provably Unbreakable Encryption with Short Secret Keys and One Way Functions (in English). See [here](#) or [here](#). See peer-reviewed published version [here](#) and [here](#) and <https://aircconline.com/csit/csit1109.pdf>.
- ScienceDirect (2022-May) – Farsighted Collusion in Stable Marriage Problem, with No Self-Harmful Plays: Efficient Algorithm for Determining the Unique Man-Optimal Matching (in English). See <https://www.sciencepublishinggroup.com/article/10.11648/j.ajcst.20220502.24>.
- GInfo (2003) - Shortest path in a weighted graph with small edge costs. An independent rediscovery of Dial's algorithm for this problem. (attached in document set).
- Self Published (2019b) – Towards Solving NP-Complete and Other Hard Problems Efficiently in Practice (in English). See [here](#) or [here](#). (attached in document set).
- Self-published (2015) – Dealing it multiple times does not change the expected value. See proof [here](#) and [here](#) and code sample [here](#) and [here](#).
- Self-published (2015) – Project: Success Probability Calculator (in English) Implements a method for identifying the optimal investment strategy to achieve a target bankroll starting with some capital. The project involved using of some more advanced data structures such as an efficient LRU cache implementation and a Space vs. Time Tradeoff Structure. See details [here](#) and source code [here](#) or [here](#).

### Education:

- **Lobachevsky State University**, Russian Federation – *Russian Language for Foreigners* – 2019-2020.

- **Russian Center for Culture and Science**, Bucharest, Romania – Russian Language for Foreigners (A0-A2) - 2016-2019.
- **University of Bucharest - Faculty of Mathematics and Computer Science** – *Doctoral Studies in Applied Computer Science* – 2014 - 2019 (ABD – All but Dissertation: No Doctor Diploma)
- **SKOLKOVO Moscow School of Management** - Offered MBA admission in 2012, but the program was immediately thereafter dismantled, so I did not attend. Took competitive negotiation training with tutor Moty.
- **University of Bucharest - Faculty of Mathematics and Computer Science** – *Master's Degree Software Engineering* – 2008-2010 (Dissertation thesis "Resource Sharing in a multi-process, multi-transaction environment", Merit scholarship during 1st year)
- **University of Bucharest - Faculty of Mathematics and Computer Science** – *Bachelor's Degree Computer Science* – 2004 - 2008 (License thesis "CryptoSafe", Merit scholarship during 1st year)
- **National Computer Science High-school "Tudor Vianu"** – *Baccalaureate, High-school Degree* – 2000 - 2004 (after High-school I was offered admission at Cornell University but declined eventually).
- **The Open University Business School - OUBS (UK)** – *Professional Diploma in Management (MBA Stage 2, postgraduate level)* – 2008 (with Distinction, their highest merit appreciation)
- **The Open University Business School - OUBS (UK)** – *Professional Certificate in Management (MBA Stage 1, undergraduate level 3)* – 2005 – 2006
- **The Open University Business School - OUBS (UK)** – *MBA Course B820 Strategy graduated (postgraduate level)* – 2011;

Mircea Digulescu's leadership portfolio and credentials include:

- Founder, CEO and CTO of Mat Soft Technology (2009-2014). Raised 165k euros (from 500k euro initial promise) at a \$2.5M valuation from distant relative of his, a Romanian business man and, together with his own funds, created the company in 2009. The startup aimed to offer a private cloud infrastructure, on top of which a business process automation engine (BPMS) can be run and operated. From a commercial perspective this was a Robotization Process Automation (RPA) company in present day terminology. See details about the product and the phase to which it was bought here: **MAT Business Suite**. In 2012, the investor terminated financing being generally obscure as to reasons. Leading Mat Soft Technology involved functioning as both CEO and CTO (having invented the platform and algorithms of the underlying technology) and leading a team of 4-9 elite software engineers as well as handling stakeholder relationships and legal matters. After Mircea Digulescu sold his company to investor in 2014 for 1 euro, the idea was picked up and successful developed by Romanian "unicorn" UiPath.

- Director of Engineering. Leading the Bucharest Engineering Office of Bolt.eu and growing it from 3 to 23 people senior engineers (2018-2019). Bolt.eu (then Taxify) is the European ride-hailing and on-demand tech services provider, competitor to the US Uber and Lyft. The official title was Engineering Manager, but the effective work was that of Director. Leadership involved some elite technical contributions (solutions) as well (see Section 3 below), but included holding 1-1 meetings, screening candidates via interviews, performance management and evaluation, appraising migration and other risks for each office staff member, having technical meetings and maintaining relations with the corporate parent (including status updates) remotely via the Head of Engineering. I earned 17.000 Euros / month while working with them.

- Vice President of Technical Product Management with DevFactory (2018 and 2020). DevFactory is a large IT conglomerate which is a terminus points for many small startups which fail to self-sustain. The role involved discovering, fixing and improving the technical architecture of the products of such companies and finding ways to integrate them into existing portfolio. Work was of an elite level (moderate technical depth though). This was a leadership role because it involved working in an advisory role to company CEO and President, as part of a team. I earned \$16.000 USD / month while working with them.

- Product Manager with SIVECO Romania (2005-2006). This was my second job at my first employer (20-21 yo). Starting as a software engineer, I was quickly noticed by VP of Engineering and Execs of SIVECO Romania and moved into a semi-leadership role: I owned the technical roadmap of the Business Intelligence and Analytics (OLAP) product of the company. They also used me to do presales and to fix stuff before customer acceptance for big budget gov't contracts, like The National Bank of Romania and the Romanian National Health Insurance House, as well as pitch the product to private companies on the Romanian market at the time, like Accelor-Mittal group (Steel), Romanceram (Ceramics), Velpitar (bakery) and others. While they made quite some money from me, I was not close to any leader there and was not involved in sharing profits. I earned 700 euros / month while working with them.
- Professional Certificate in Management, The Open University Business School (2005-2006) – distance learning, via Codecs. Learned MBA and Management (undergraduate level). Was quickly remarked and courted by the non-gov't secret organizations for the first time.
- Professional Diploma in Management, The Open University Business School (2007-2008) – distance learning, via Codecs. I continued my MBA studies at a postgraduate level and completed the program with Distinction (top <5%). Course involved both individual work, tutor marked assignments as well as brief in-person meetings in Bucharest and Brussels for residential schools.
- Moscow School of Management SKOLKOVO (2013). Was offered admission for fulltime MBA program but did not join since it was terminated the same year and also required 60k euro payment. I did have the opportunity to take an interactive demo course for Competitive Negotiation with renowned Israeli lecturer Moty. Application process took place 2010-2012.
- Russian Center for Science and Culture (Rosstrudnichestvo), Bucharest (2016-2019). Student for Russian language for foreigners (graduated with A2 language competence certificate after exam).

Mircea Digulescu's computer science and education credentials include:

- Div1 coder on [www.codeforces.com](http://www.codeforces.com) – roughly in Top 0.3% best of the best coders of all time world wide - <http://codeforces.com/profile/mircea85> - highest score 2022, *candidate master*, with over 320 problems solved (NB: I continue training here, so current rating can vary).
- Codility Golden Award for the Calcium 2015 Challenge – 2015 – see [here](#).
- 10th place at the ACM ICPC Southeastern Regional Contest - 2005
- 4th place at the ACM ICPC Southeastern Regional Contest – 2004
- 1 Bronze Medal at European International Olympiads in Computer Science (CEOI) - 2004
- 1 H. Mention at European International Olympiads in Computer Science (CEOI) - 2003
- 3rd prize at the Romanian National Computer Science Olympiad – 2004
- 3rd prize at the Romanian National Computer Science Olympiad - 2003
- Multiple prizes at other lower-level Computer Science and Mathematics Olympiads and contests

Teaching Experience and Education:

- University of Bucharest - Faculty of Mathematics and Computer Science – Doctoral Studies in Applied Computer Science – 2014 - 2019 PhD (ABD) completed. Main contributions related to Stable Marriage Problem and to Distributed Sorting. I encountered heavy resistance at getting my work published in indexed peer-reviewed journals – for matters of form - not lack of correctness or relevance, which lead to delays. Finally, in summer of 2019, after completing all work except dissertation, I withdrew from the PhD program in order to get my diplomas. I thus graduated ABD – all but dissertation (for which indexed publications were required).

- Trainer at Academia Credis (IT Training) –Java Basic (2017): I taught the Java Basic course to a class of about 15 adult students as a side job, more out of passion and my desire to learn Java as well. This was an on-site, in person project, during evenings. I earned 1000 EUR for the month-long course.

- Assistant Professor at University of Bucharest - Faculty of Mathematics and Computer Science (Romania's top University - <http://fmi.unibuc.ro/>) (2014): I taught Object Oriented Programming (OOP, C++) and Formal Languages and Automata (LFA) courses, holding lectures, providing hands-on assistance, creating and handing-out workouts, providing written and oral feedback and generally developing specified aptitudes. I had a great time and all of my students got excellent industry positions later on. I had a great time teaching. I earned about 350 Euros / month while working here.

- Train of Trainers Course (2014) at Friends. Completed this program at the invitation of a friend at the time. Friends is a volunteering non-profit, associated with University student groups and student life.

- National Students' Congress (2013) – Palace of Parliament (Bucharest) – Speaker. I blabbered a bit about some irrelevant educational topics. Was invited there by surprise.

- Softbinator Tracing the Roadmap Conference (2012) – Romanian National Library (Bucharest) – Speaker. I spoke on topics of Entrepreneurship and explained the value in having a vast number of autonomous economic actors, versus dealing with an oligopoly.

- University of Bucharest - Faculty of Mathematics and Computer Science – Master's Degree Software Engineering (2008-2010). Dissertation thesis "Resource Sharing in a multi-process, multi-transaction environment", Merit scholarship during 1st year.

- University of Bucharest - Faculty of Mathematics and Computer Science – Bachelor's Degree Computer Science (2004 – 2008). License thesis "CryptoSafe" – a WinRar desktop application which encrypts data with AES instead of compressing it. Merit scholarship during 1st year.

- National Computer Science High-school "Tudor Vianu" – Baccalaureate, High-school Degree – (2000 – 2004). During high school I joined fashion of taking SAT tests (1410 SAT1, 800 SAT2 Math IIC, 730 SAT2 Physics) and applying to US University, and I was offered admission at Cornell University but never joined - declined eventually due to financials mainly.

Mircea Digulescu's portfolio of past projects includes, but is not limited to the following:

- Bolt.eu (then Taxify.eu) <https://bolt.eu> (2018-2019). Bolt.eu (then Taxify) is the European ride-hailing and on-demand tech services provider, competitor to the US Uber and the Russian Yandex Taxi. The personal technical contribution for Bolt.eu included determining the architecture of system to function as an internal competitor to Google Maps for routing drivers to riders and computing Estimated Time of Arrival (ETA), based on OpenStreetMap and the GPS location points collected from the drivers, and performance-optimizing the Spark jobs part of the dataflow. It also included writing the Redis scripts for fast computation of a location suggestion service (guessing where the riders wanted to go) based on several signal sources and heuristics, obtaining O(1) performance and 95% accuracy. The third important task was writing from scratch a driver-rider matching module, emphasizing performing as many mutual acceptable matches as possible, using the Min-Cost-Max-Flow algorithm based on Ford-Fulkerson method. Additional projects included corrected technical decisions for a compliance reporting project for the Australian gov't and another data intelligence one for marketing. These are all production systems, running currently with over 100 million active users, and over 10 Billion monthly transactions: when you open the Bolt.eu app to order a ride, the automatic destinations suggestions, the ETAs you see for the pickup and drop-off, as well as the very driver which is assigned to you, all go through systems technically built by Mircea Digulescu. I earned 17,000 Euros/month for 12 months on this onsite role.

- Collective2 <https://trade.collective2.com> (2017-2018). Collective2 is a "poor man's hedge fund", democratizing investing by allowing small individual investors to discover and automatically duplicate – for a fee –, strategies of top traders on capital markets, especially stocks and derivatives. I developed the entire reporting infrastructure for them, including retrieving, caching and serving historical Stocks, Derivatives and FOREX quotes, determining VaR MTM value of portfolios, integrating live quotes, all culminating with an

accurate and responsive P&L service. All this was technically interesting work, involving SQL query design and optimization, Database Connection Pooling, Cache Eviction Strategies, Service Monitoring, as well as financial domain specific knowledge, useful for implementing an Option Settlement Calculator and many other details. The work was particularly challenging since the client was a startup, and thus did not want to take the costly alternatives using high-priced historical and live quotes services that most hedge-funds and banks take. While the title was Senior Software Engineer, I was working directly with the company founders. I earned \$6,500 USD/month for 7 months on this remote role.

- Hearst <https://www.hearst.com> (2019-2020). Hearst is a western international media conglomerate, the creator, among others of the blockbuster western film The Avengers. My project was for their IT Services department. It involved fixing, modernizing and automating some workflows, mainly pertaining to flow of financial data concerning reimbursements from PeopleSoft into Concur and then Cognos. The project entailed creating a new SQL data model and C# tasks, all while working with stakeholders, users and third parties to correct and remake the flow properly. Automation tools like Informatica were also employed. My title was Technical Architect. I earned \$11,900 USD/month for 7 months on this remote role.

- Cegeka <https://www.cegeka.com> (2014-2015). I did performance optimizations and stability fixes for their Cegeka Care healthcare / nursery homes product mini-ERP system, which the existing team was unable to tackle after months of trying. In doing this I reduced the web system's loading time from >1 minute to 2-3 seconds, and the per-page loading time of heavy pages from 30-45 seconds to about 4 seconds. An interesting part of the technical solution involved implementing an Euler walk of a housing units tree to allow  $O(1)$  is-ancestor queries, directly from SQL. Project was in C#/MSSQL/ASP.net. My title was Senior Software Engineer. I earned ~4500 euros / month while working with them, for 3 months. Project was on site.

- Societe Generale <https://www.societegenerale.com> (2016). I worked on a desktop application which is used by traders to trade on markets, especially stocks and derivatives. I implemented a filtering module for financial instruments and provided the technical solution for an efficient Options' financial curves evaluation module which integrated with their VaR portfolio evaluation module. I also did other fixes and enhancements for this Front Desk trading tool, which allowed traders to perform both manual and automatic tasks, such as hedging, automatic trading, etc. Even now, billions of euros in trade goes through the modules I have built. I earned 4000 euros / month while working with them, for 9 months as Senior Software Engineer. Project was on site.

- Finastra (then Misys) <https://www.finastra.com> (2017). Finastra (then Misys) is a global firm developing software for the Banking System, having more than 90% of the top 50 banks as customers. My responsibilities involved performance optimizations and stability fixes on their core Summit product. Received excellent feedback from both customers and management. I learned a lot about core banking operations, including financial products for Money and Capital Markets. I earned 5500 euros / month while working with them, for 5 months, as Technical Lead. Project was on site.

- BNR (working for SIVECO) <https://www.bnr.ro> (2005). While working for SIVECO Romania I did an Analytics and Business Intelligence project from scratch for the Romanian National Bank. The project involved collecting, processing and serving data for two main areas: financial supervision and banking stability. I was involved in operating the 2005 stress-test of the banking sector which identified banks vulnerable to financial shocks such as the upcoming 2008 financial crisis. I also got acquainted with modern money mechanics and the then-in-effect Basel II standard. I earned 1300 euros / month while working here as Software Expert, for 3 months for this on site role.

- CNAS (working for Siveco) <http://www.cnas.ro> (2006). While working for SIVECO Romania I did an Analytics and Business Intelligence project from scratch for Romanian National Health Insurance House. It involved mainly analytics and projects over consumption of medicine, both for planning and fraud detection purposes. I learned that the Romanian population had overall a rather large consumption of medicine. Project was on site, during the period of time when I was Product Manager at SIVECO Romania – they generally

used me to show credibility to the beneficiary and streamline signing of acceptance papers for the >\$10 million multi-annual software project. I earned 1300 euros / month while working here, for 2 months, on site.

- Mat Soft Technology **MAT Business Suite** (2009-2014). While bootstrapping and benefiting from a small investment, I designed the technical architecture and implemented a few modules in an ambitious Private-Cloud integrated system, commercialized as a BPMS tool. I was also technically leading a team varying from 3 to 10 people. From a commercial perspective we were a Robotization Process Automation (RPA) company. See details about the product and the phase to which it was bought here: **MAT Business Suite**. The concept is largely the same as that of later successful Romanian "unicorn" UiPath <https://www.uipath.com> and US intelligence company Palantir <https://www.palantir.com>. The technical work was pretty advanced, but the small size of the investment did not allow it to be all completed in that go. I worked as CTO, Chief Architect and Software Expert essentially; all while fulfilling CEO duties as well. Project was in C#. I did not earn money while working here, but was instead bootstrapping and spending my own savings. I did direct circa 90-120 thousand euro to myself during the lifetime of the project.
- DevFactory <https://devfactory.com> (2018 and 2020). DevFactory is a large IT conglomerate which is a terminus points for many small startups which fail to self-sustain. The role involved discovering, fixing and improving the technical architecture of the products of such companies and finding ways to integrate them into existing portfolio. Work was of an elite level (moderate technical depth though), focusing on the AWS cloud services, like AWS SNS, SQS, SendGrid, ElastiCache, Cognito, Secrets, CloudFormation, etc. One project involved architecting a responsive Contact Tracing App system scaled globally (billions of users), which can be used during pandemics or wrt to people handling secret information. I earned ~\$16.000 USD / month while working with them, for 5 months in total, on this remote role.
- Mircea Digulescu also received Senior Software offers from Google (2011 and 2021) and Amazon (2019) – which is a true attestation of his skills. He declined however, since they didn't pay enough and imposed travel restrictions.

## 2D. Mircea Digulescu's Political Stances

The Better World Project is a social-political-military initiative by Mircea Digulescu to better our world. Mircea Digulescu's view for a better society is based on his constituent values, which are, in this order, **Truth, Liberty, Justice, Tolerance and Love**.

Essentially a "better society" in Mircea's view, is one characterized by a wealthy libertarian state, with ample civil liberties for all, economic opportunities especially for intellectuals and leaders, and generally an equitable participation in terms of inputs and outputs to social life. Additionally, such a state is capable to ensure its external and internal security and also serves to safeguard the civil liberties in question.

According to Mircea Digulescu, **the sole and necessary rationale for existence of State are (1) ensuring security from external military intervention and also from emerging internal military forces which threaten the core libertarian nature of the state (2) ensuring prevalence of civil liberties internally and the factuality of the rights of the individual and (3) achieving the goals of humanity**. Nothing less, nothing more. The State is NOT a family. It does not "harmonize" the interests of all nor "put them in balance" in order to decide any "common path" or anything of the sort.

In this sense, Mircea has developed a more ample theory, based on his empirical experience and also on theoretical knowledge, both researched and developed by him.

**Mircea Digulescu considers the state "an alliance of people", to a much greater extent than "a monopoly on physical force"**. The later can be seen sometimes as a means (often times not being fully materialized in practice), whereas the former is more like a characterization of [desired] fact. Citizens in a libertarian state should generally agree on the fact the state needs to be libertarian and on the

fundamental civil liberties and individual rights to be defended - even when such defense of rights is to their personal social, political or economic detriment. Of course, the state needs to provide adequate safeguards, so that when such detriment would be too great to ignore - rationally or emotionally - that it acts so that individual liberties and civil rights are upheld nevertheless.

Mircea's option is 1789 French Republicanism (as opposed to Monarchy or Oligopoly). He is a left-wing libertarian. Left-wing in this sense is "by the Wikipedia definition" - so the actual meaning of the term, most commonly used in relation to the 1789 French Revolution. Currently, in the Western block, especially in the USA, his views would probably be described as "right-wing" by the current colloquial understanding of the latter term. Nevertheless, both terms refer to the same thing: a societal order based on individual liberty, in which the state is tasked with upholding and defending it against external and internal forceful threats, but not more.

Additionally to policy making and enforcement, a better world is also characterized by improved mentalities and behaviors of people, as well as enjoying a somewhat different distribution of raw and derived economic products and services. So it is not only what it is supposed to be "de jure" (in law - even if the law factually characterized its application), but also "de facto" (in factuality of the interactions between citizens and people).

**Mircea wishes to enact a libertarian, free society and world because (1) he considers this a fundamental goal of humanity which has value for himself to enact and (2) he wishes to live in such a world.**

In some sense, Mircea Digulescu can be seen as a civil and human rights champion. Nevertheless, this should be understood in its factual sense: Mircea is against Western-block hegemonism and oppression, and denounces most so called "human rights groups" or "civil activists" acting OUTSIDE the Western block (and many from within also) who are just fronts for the current Anglo-saxon hegemonic elite, seeking just to overthrow whatever free governments are in the world (particularly in Venezuela, China, Russia, Belarus, North Korea, etc.) to install western puppets in their lieu.

Mircea Digulescu strives to propose goals and solutions for the global society, thus not limited to a particular country or state.

In this sense he seeks to

- Develop basic awareness and political skills of youth and others in dealing with social-political topics.
- Raise awareness of how the current global society functions (combat Western-block propaganda).
- Build a foundation of codified knowledge regarding what is desired.
- Highlight the gaps between what is desired and what is currently happening.
- Propose legislative and policy measures for a libertarian state to achieve its goals.
- Propose Strategy measures to undertake to combat imperialism, hegemonism and oppression - so as to achieve a libertarian state.
- Develop people and networks willing and able to enact a libertarian state.
- Engage in political and technical actions regarding the enactment of a libertarian state and the defeat of imperialism, hegemonism and oppression.
- Speak publicly or to the media, at speaking events and privately to disseminate and promote this knowledge, or elsehow achieve this objective via concrete engagements with others.

Note that besides research and writings, Mircea Digulescu actively seeks to enact such a better society, based Liberty above all, via political actions.

Mircea's endeavours pertaining to the Better World Project can be classified in five major directions:

- **Fundamentals of Liberty.**
- **Understanding your Reality.**

- **What are we fighting for.**
- **Achieving Liberty.**
- **Taking Action.**

The core materials pertaining to The Fundamentals of Liberty are almost complete, and consists of a few papers (some to be embellished):

- On the Functioning of Society [RO] (2019). Link (Blog): <https://reflectii-despre-societate.blogspot.com/2019/07/asupra-functionarii-societatii.html>.
- On Happiness Part I [RO] (2015). Link (Blog): <https://reflectii-despre-societate.blogspot.com/2015/05/asupra-fericirii.html>.
- On Liberty [RO] (2013). Link (Blog): <https://reflectii-despre-societate.blogspot.com/2013/09/asupra-libertatii.html>.
- On Morality [RO] (2012). Link (Blog): <https://reflectii-despre-societate.blogspot.com/2012/11/asupra-moralitatii.html>.
- On Elections and Voting Part II [RO] (2012). Link (Blog): <https://reflectii-despre-societate.blogspot.com/2012/05/despre-alegeri-si-vot-ii.html>.
- On Elections and Voting Part I [RO] (2012). Link (Blog): <https://reflectii-despre-societate.blogspot.com/2012/05/despre-alegeri-si-vot-i.html>.
- On Power [RO] (2012). Link (Blog): <https://reflectii-despre-societate.blogspot.com/2012/05/asupra-puterii.html>.
- On Democracy [RO] (2012). Link (Blog): <https://reflectii-despre-societate.blogspot.com/2012/01/asupra-democratiei.html>.

In brief, Mircea Digulescu has his own independent vision of how world, societal and social affairs should be conducted. Such vision is somewhat aligned with the ideals of the 1979 French Revolution and entail an open sexuality, non-interference, security from physical harm, absolute freedom of commerce, civil liberties, external state security, as well as a prevalence of the constituent values of Truth, Liberty, Justice, Tolerance and Love.

For exemplification, some policy issues which radically differ from what is currently prevalent in the Western block include (the list items below are expanded on slightly on the **Better World Project** page, btw):

- **Free sex life between adults.** Fully legalization and non-regulation of Prostitution, Sex for Benefits, Sex for Jobs, Sex down the hierarchy line within a job or other authority context, etc. In fact, any sexual behavior (including BDSM which in some few jurisdictions is still illegal) between adults is absolutely permissible. No "vulnerable" nor "privileged" parties. No such thing as "sexual exploitation". Caveat Emptor. Sex and sexual behavior is an unremarkable transaction between adults.
- **Sex between adults and sexually aged minors and between minors.** Mircea Digulescu supports the libertarian, Soviet and traditional (historical) French model on this. Anything between sexually aged persons - so with someone who has reached puberty should not form the object of law. More drastic punishment can be enacted legislatively for rape or slave trafficking of minors, but the 'definition of rape' should not change to prohibit them from having sex, nor prohibit adults from trying to have consensual sex with them. Parents have enough leverage to keep their minors at bay - if they (very wrongly in Mircea's opinion) - so consider: by restricting the movement of their children.
- **Free relationships of any kind, free termination or resumption.** Relationships between adults are their own affairs. This includes both marriage, dissolution thereof, other romantic or sexual relationships such as polyamory, polygamy, polygyny, sexual orientation etc. This extends beyond romantic / sexual relationships. It includes business, economic, social, fun and any other kind of recurrent or one-time

encounters. Using deceit or force preemptively or proactively to prevent relations between third parties is also prohibited.

- **Traditional Family.** Mircea Digulescu supports the traditional family, consisting of a man and a woman, collaborating to raise small children. The above policies on relationships, sex and romantic life, should complement and strengthen the traditional family - although of course, given their enactment the "who with who" will change sometimes drastically (becoming equitable and more prevalent). Note that a promiscuous sexuality is by no means incompatible with a traditional family - as elites both East and West clearly show: having a large number of sex partners both before, during and after a marriage, both as a man and as a woman, does NOT inhibit in itself in anyway developing a loving traditional family for ones children nor getting married. Mircea supports the Celtic model in this regard, and denounces the Roman one.

- **No 'woke' culture. No feminism, no positive discrimination, no racism, no LGBT, no hard drugs** (eg. heroin). Mircea Digulescu is against all of these and definitely against the repeated and forceful propaganda on such topics [such as LGBT 'pride marches'] and considers the actual people involved with these 'movements' as Western foreign agents actually seeking political regime-change goals outside the Western world. Also, within the Western block such euphemism are used to curtail the civil rights of regular people (the vast majority) and to perturb normal romantic and sexual relationships between men and women.

- **No illegal immigration.** The so called immigrants within EU and USA are actually mainly former recruits (and many still Dash terrorists) of the Western establishment for military and political purposes. Also, the rest of such population are precisely the unqualified, not particularly smart, destitute up-starters that the Western hegemonic elites use as a voting-machine power base of support [including to be placed in key roles and to be used as extrajudicial "muscle force" against the local, so called free population].

- Absolute freedom of speech. No "community standards".. Anything which is a form of communication or information storage is permitted, except: (1) ordering someone to commit a crime or setting up operational details for such an attempt, bilaterally or multilaterally; (constituting that crime) (2) intimidating someone with a threat of imminent violence, threat which, absent the cooperation of the victim, would have been materialized or ample measures were taken to convince the victim that it would have materialized (eg. simulated acts of execution, threat after the victim was knowingly victimized physically similarly recently by the same group, etc.); (constituting dominance via intimidation) (3) military information consisting exclusively of documents classified as secrets, obtained illegitimately or data from them, if the data was obtained illegally. Content cannot be criminalized based on what it in itself represents (even if it pertains to false information, 'fake news' under someone's community standards, etc.). That's free speech. Nor can posesion, nor distribution of content be criminalized. That's politics.

- **Absolute freedom of disposition of private property.** People and groups must have absolute right to dispose of their private property - including real-estate, intellectual property, machinery, monetary means, digital assets, contracts, etc., as they see fit. In particular they are allowed to transfer it or its products to anyone. He also has the right to destroy it, to donate it, etc., as he sees fit. For avoidance of doubt, people have the absolute right to exploit natural resources found on their properties (eg. real-estate) also in any way they see fit. Real-estate comprises also 1 meter below ground and 100 meters above ground. For the avoidance of doubt, people have the right to collect rainwater, plants and mushrooms, soil and salt (no further than 1 meter below ground), as well as breed the air, as they see fit, from their own property, WITHOUT ANY additional permits and without this constituting economic activity. In terms of real-estate people should practically not end up owning more than 1 hectar of land for habitations or 10 hectars of land for economic activity per person.

- **Absolute freedom to dispose of scientific results and technology.** Right to DIY (Do It Yourself). People and groups must have absolute right to do research and to create and use technology. This includes in the fields of medicine and biology. They also have the right to alter the germ-line, so long as they do it after

giving full and adequate consent in front of a public notary. They have the right to access dangerous or experimental treatments for example, if after giving full and adequate consent in front of a public notary. Such consent must simply check that they understand the potential risks and benefits (or lack thereof), that they are aware of the position of different official bodies (eg. government) on such matters, and that such treatments can and/or probably will end up badly for them, according to whose' views. People have the right to harm themselves, if they so choose. When minors are involved, consent of Tutelar Authority may be required.

- **Absolute freedom to develop private property.** People and groups must have absolute right to build, alter, change, or use any and all parts of their private property (including real-estate) as they see fit. In particular they have the right to create new private property - including intellectual property, without any constraints. Some safeguards may be put on buildings and machinery so as to ensure the designs are sound, so that if for example one enters a building, he or she does not need to ponder first "will this building collapse on me?". Ideally such obligations are put on the developer and do NOT require authorization. However, authorization of such designs exclude liability in case of collapse or other matters - however, respecting such standards WITHOUT performing any bureaucratic formality should also do. Creation of intellectual property should be absolutely free.

- **Absolute freedom of commerce.** Basic commerce between people within the state, including organized as companies, should be permitted absolutely. The underground and strategic natural resources are the property of the state as a whole and their distribution and consumption should be regulated by state policy-making. At least circa 30% of annual resource production should be allotted to the population "to do with it as it pleases [except export it]". Restrictions should only be placed / placeable on strategic sectors - which are mainly those which can impact the EXTERNAL state security (such as weapons manufacture, new technologies, natural resources, etc.). Research which DOES NOT involve State Bodies or members or contractors thereof, should be permitted unrestricted as an exception to guards on strategic sectors. State monopoly should exist and be fairly distributed downstream over some specific "by themselves" finite resources (say ~50% state controlled): such as spots for Restaurants and Shops, air routes, etc.. Also, occasional, globally low-volume and one-off trades should not be considered economic activity.

- **Regulated sectors of economy.** Public Utilities should be regulated. Illegitimate monopolies/oligopolies should be regulated (after being legally declared illegitimate monopolies). Windows should be forced to compartmentalize its source code to allow users to exclude features and allow interoperability. It should also be forced to function within a VM machine. Google on the other hand cannot be regulated: it is a monopoly, but not an illegitimate one: its simply the best product by far out there, and there are no measure which restrict users to interact with it freely, although this is changing. Some aspects like Ranking, Modifications of Own data and so on, can be regulated to be particularizable, but unlike MS (which leverages its monopoly via "bundling") so far in this sense Google did not [because it did not have to]. Also, Retail Banking should be considered a public utility and where applicable monopoly and there should be regulatory obligations "to serve all customers [including if targeted by sanctions of other countries, if performing deemed undesirable activities such as political activity, prostitution, legal narcotics trade, etc.]".

- **Unregulated creative and innovative sectors.** Development, use and commercialization of technology, including AI (yes, including for "deep fake" purposes) should be free and unregulated, except with due regard to weapons (3D models for guns, ammunition, nuclear bomb designs, etc.). Export on technology can be partly controlled - depending on how it was developed. Indirect exports such as the US practices on the matter (ie. export to another citizen while within own territory is an export if that citizen later exports) should not be a matter of law.

- **Economic outcome in practice. Must favor intellectuals, leaders, entrepreneurs and military over unqualified or basic labor and agriculture.** This is the antithesis of the Anglo-saxon hegemonic "New Deal" economics of the XX century, which aimed, among other things, to reduce the amount of

available food and agricultural products on the market, to create artificial scarcity, so that they could exploit the urban population, especially the educated ones more widely and more cheaply. See State stakeholders below for examples of categories desired to attain a superior economic outcome in practice.

- **Weapons Control.** Depends on the particular context of the state. In states like USA, right to be armed and weapons are a sine qvo non. In Russia its much better that they are only license-based. In EU states its somewhere in between: can largely go either way. Generally weapons control regulation should not fall on the shoulders of the owner / user but on those of the seller / provider (eg. any due diligence or such - if any). Also, people must have the legal right to use those weapons to defend themselves: clear and unequivocal rules of engagement must be defined for situations and categories of response. People must have the right to use weapons including against the state and its representatives, including when acting within state authority - when they are comitting a breach of rights: no matter if such state representatives "have the proper paper work [eg. court orders]" - if the facts of the matter make their actions defensible against with armed force, then people have the right do so without punishment. Also, Encryption and Use of Encryption, including without separation Unbreakable Encryption [by even state actors acting in unison] should be free and unregulated for all everywhere (assuming of course they are able to self-develop it or get it from a vendor): the benefits [especially political in nature] by many orders of magnitude outweigh the costs. Even where the cost/benefit trade-off shifts, morally, encryption is [must be] a human right.

- **Safety of Food, Water, Air, Medicine and such stuff.** Food should be healthy. Current toxic and low-nutrient food in the EU is due to imperialistic control over food supply chains - partly via legislative regulations. Food in Russia is good. Follow the Russian model. Also, alternatively, food supply chain should be planned on the entire producer-processor-retailer-preparer-delivery guy level on yearly or 5-yearly basis, together with consumers. This means consumers [segments or even individually via personalization] decide what and how to eat, and they pay in advance / periodically to supply the supply chain. This can be done at gov't and mayor house levels. Supply chains and markets should be carefully watched by State and regulators, to make sure they dissolve illegitimate monopolies or prevent them from speculating their monopolistic power to degrade the quality of these products. This includes monopolies over supply chains, unrelated to the direct research or manufacture of such produce.

- **Healthcare.** It is vital that private healthcare coexists with state healthcare: both systems are required. State Healthcare is politicized in almost all states (just slightly less so in Communist ones). Also unlicensed healthcare should be allowed, including by non-doctors, when clearly and properly presenting themselves as such. Private sector can and should be regulated, but only mildly so. People should have power to decide which treatment and opportunity of treatment, including having the power to take useless or dangerous medications. Non-dangerous medications should be released without a prescription by every pharmacy. Dangerous medications (except narcotics) should be released to adults, potentially after taking a full and adequate consent affidavit at a notary office [confirming the understand the risks, they are able to consent, etc.] after which they can buy the medicine with their own money. Medication which, when taken inappropriately present ample public health hazards - as antibiotics are claimed to be, can be released to someone understanding this [eg. after pharmacists explains how to take the medication]. Pharmacies must be obligated to supply any medication in the public health system with advance payment and reservation by retail customers. Full and informed consent must exists for any medical procedure or medication. This must be in writing and taken before a notary for anything non standard or hazardous (including CT, radiography, surgery, narcotic painkillers, etc.). In emergency cases, and only when the patients life or long term wellness is in grave jeopardy, can a notary come at the place of provision to take the consent. Provision of such procedures or medicine absent this consent is a particularly grave crime and should be punishable by death. Also, any adverse treatment or sudden cessation of treatment absent any court order should be considered aggravated murder and punishable by death.

- **Psychiatry and Crime Prevention.** This should follow the standards of any other medical branch, except when the patient is unable to give consent because of his minority, mental health situation or other aspects

(eg. is in a coma, has speech difficulties or does not speak the language, etc.). In these cases, a notary should come and take consent. Absent such a consent, treatment might be doable only in emergency cases - acute psychosis for example -, only so long and insofar as it is required to eliminate the state of emergency (end or ameliorate acute psychosis), but no longer than a reasonable and typical sufficient duration such as 1 month and never beyond 6 months in a 5 year period, and only via a court order, and only in the strict interest of the patient. Additionally, in case of crimes committed due to psychiatric conditions (illness, psychosis, etc.), it is prohibited to have any HARsher limitation of rights in duration or scope than if the crime was committed unrelated to psychiatry. In effect, for crimes committed due to psychiatric affection, the restrictive measures can be replaced with forced hospitalization (WITHOUT forced treatment), but only within the general bounds of the punishment for the respective crime, and also no longer than the maximum specific custodial punishment which would have been imposed for respective crime if it were to have been committed while sane. If the crime could not have been possibly committed while sane, then the general maximum for that category of crimes must be respected. Crimes committed while insane (including temporary such as due to narcotics) should be judicial tracked on the criminal record - thus repeat crimes could result in harsher punishment/longer terms. The problem with crime - especially grave crime - is not that the punishment terms are too low: it's that criminals get punished too late and some (up to 10%) never. If punishment were to occur immediately after a crime, even if for a shorter custodial time, crime rates would be much lower.. this includes most mentally ill people as well: unless grave learning disabilities or lack of self-control, even the mentally ill can understand to behave, so that they are better off - even when deranged or psychotic.

- **Economy.** There should be a factual mix of state and private economy. State should directly control most of strategic sectors economy - and regulate the rest of such sectors, while private economy can target Innovative Industry, Civilian Products, Services [rendered on the national territory], etc. State should not have the power to impose sanctions supported by legislative penalties which apply extraterritoriality: bans on trading with some parties can be imposed democratically but simply traveling abroad to "circumvent them" should be legal: no extraterritoriality of law. Also, economic transactions between companies or involving retails actors cannot be restricted and should not be regulated except insofar as to deal with Monopolies, prevent public dangers (food poisonings, construction safety etc. [for these two situation simple ample marking or notary confirmed consent can suffice - total ban should not be imposed]) or for concrete national security grounds (eg. preventing a citizen from selling his plot of land situated next to a major military base to a terrorist group or to the enemy, for the purposes of the later attacking the said based from there).

- **Monetary Policy.** States should only be able to dispose and regulate "what they do" with "their portion" of the national resources and economy at whole. This portion should typically be about 50% of natural reserves, 50%-70% of extracted natural reserves during the calendar year, 30%-50% of the civil economy. They can impose taxes, fees, redeverences and such, but such taxes must remain TAXES: ie. they must not regulate economics or political goals via imposition of taxes or authorizations [eg. make some activities hard impossible to practice by all or by some because taxes and authorizations required]. Also, for anti-racketeering purposes, the entire cash monetary base of a country should be fully changed (new style of printed money) every 5 years, with only 12x average gross salary convertible to "new money" [the rest - no: not even if of justified origin]. The rest can be converted prior to the change, via banks and regulatory anti-racketeering safeties. In a world where prostitution is legal, light drugs [at the very minimum alcohol and tobacco] are legal and gambling is legal (but not ubiquitous) - there should be really little social opposition to such a measure, which can then have only benefits. Of course, if the above legitimate practices - and above all clearly and by far prostitution - are required to be done illegally, then, yeah.. totally against such a measure. Also if normal living.. such as getting the food you want [eg. healthy food from local, unregistered and unregulated farmers willing to sell/give it], the medicine YOU want, the housing materials / house-building services you want, etc... is only possible "Under Consent of King" or is, as in EU right now, de facto illegal, then again.. yeah.. totally against cash recycling. But in a normal state, a libertarian state, with low levels of corruption, then 12x average salary should be sufficient.

- **National Sovereignty.** There should be a vaster plethora of cultural laws and customs, as well as specific legislative and commercial differentiation between states in their [desired] competition to gain desired citizens. International Treaties and Organizations should not have any jurisdiction with states. Also, "no matter what", international treaties should produce no effects internally - except insofar as some laws may have been enacted in the context of their adoption: however these national laws are to be respected, not the international treaty. National laws cannot delegate authority over anything, including "deciding a matter of fact" (eg. incidence of pandemic) to any external bodies. The national / state / local authorities may use the positions, threats, promises and so on of any external body regardless if a treaty was concluded with it or not, to lobby for and obtain enactment of local rules and measures - but these rules can then also be rolled back within the national level. Nevertheless, customary international aspects such as customary international law [eg. piracy charter, Geneva convention on prisoners of war, Vienna Treaty of Treaties] and standards (eg. IS, metric measurements, etc.) can be referenced and their following may or may not be recommended or factual, and even when existent, it will be on a case by case basis.

- No extraterritoriality of law. National laws applies to within physical geographic national borders of a country/state (as decided by the proper bodies of the law making state). For hideous crimes (eg. genocide, terrorism) and some particularly grave crimes listed exhaustively (eg. slave trafficking, aggravated murder, grave or lasting bodily harm, etc.) punishable by more than 10 years of confinement, an exception CAN be made when the victim is a national of the law-making state and the crime occurred outside the jurisdiction of any other state, or the victim was kidnapped or conned to traveling there. Other than that, and even in most such cases, grave crimes should be dealt with by the state where they are committed materially. Only when such state is unable or unwilling to pursue these crimes, then, and only in the above hideous and particularly grave cases can the crime be pursued by the state of whom the victim is a national. Other than that, again: Caveat Emptor - be careful where you are traveling.

- **Harsh treatment of physically violent crime.** Mircea Digulescu strongly supports the Chinese model here. Aggravated murder should be punished by death, unless it constitutes a graver crime. Intentional murder, absent any unclarities or mitigating circumstance should also be punished by death. Grave or long-lasting bodily harm should also be punished the same way as murder, unless it constitutes a harsher crime. When doubts, mitigating circumstances or subjective legitimate defense exists (but not objective one), it can be treated more mildly, and depending on personal and objective factors with between 10 and 25 years of prison.

- **Equality before the law.** Enacting this is very difficult, however its factuality is a must for a free society. The law must apply equally to everyone, or it means nothing. In this regard, providing for formal but exhaustive privileges within the law - as per State Stakeholders below -, can be good step forward in ensuring that whatever is actually written in law stands and applies to everyone. Otherwise, elite state Stakeholders who are de-facto not accountable before the judicial system simply place themselves (but not others) above the law informally and secretly. Also, some crimes of small or medium gravity might be included in laws just as safeguards or economic policies against the behavior of the masses - which is expected to be somewhat more "crude" and unwise than that of elites.

- **State Stakeholders.** State Stakeholders are meritocratically important actors within the state, who enjoy both as a protection and as a privilege within the law, special treatment in some cases. This is in line with the principle of Constitutionalism. The overall "mass" of State Stakeholders should be small, but not the 0.0023% that it is now with the Western hegemonic elite. Typically it should lie between 5% and 10% of the population. Also the privileges and protections awarded should be reasonable and not create apartheid as with the Anglo-saxon elite. Also, State Stakeholders should be categories of people - and not a group which decides to "accept" new joiners no matter by what rule. Privileges and Protections: State Stakeholders can only be tried after they are released from immunity via political process such as exclusion from party, state body, professional or scientific body decision or potentially via referendum, facts later confirmed by Supreme Court. Also, state stakeholders also do not answer for crimes of low or medium gravity (punishable in general

by no more than 5 years or punished in effect by 5 years or less) committed against non-state stakeholders. State Stakeholders should be: active statutory leaders of political parties from central or territorial organs who have gained (alone or together) at least Constitutional Minority votes or, even absent Constitutional Minority, active military leaders of the state including and above the rank of colonel (except where title is honorary), active and former political leaders from central (but NOT from local) administration involved in policy making (but NOT the actual enforcers of policy), active members of central government, any person holding the scientific title of Doctor of Sciences or admitted for any PhD programme, any graduate of long-term higher education in a STEM field (all issued by due process of state within the jurisdiction), any person holding at least 1 million USD equivalent minimum balance in Treasury Accounts for each day of the past calendar year (or holding such value in long term, non-revocable investments with maturity beyond the current calendar year), any person actively working as a Researcher or Engineer in a STEM field within any State Accredited body or on a State Accredited Project [eg. via his own company], active heads, board members and C-level executives of State Corporations and private organizations recognized formally as Strategic Enterprise (usually working in Public/Private partnerships), judges, social activists and independent journalists (influencers) involved in political activity with over 10,000 independent genuine impressions over the past year (summed over all channels) or who have had at least 2 major media appearances before accredited mass-media institutions on political topics over the past year - unless they are foreign agents, members of banned groups, promoting ideology explicitly banned by state as main activity, or acting as proxies for such, politically involved persons who do not meet the criteria for influencers directly (or such cannot be established) but for whom the breath and scope of their political activity warrants the title of politically involved and such title is recognized by proper state bodies or validated via referendum, or if this can be established in court (eg. photos at political events, genuine media articles, written or oral statements to the effect by State Stakeholders, documents [eg. advisorship contracts, etc.]), active heads, board members and C-level executives of state recognized media companies except foreign media companies, anyone having earned in taxable income at least 100,000 USD per month for the past calendar year or owning civil real estate within the state exceeding in cadastral value 10,000,000 USD, military decorated with the highest or second-highest medals by central state bodies for military achievements related to at least 1 military victory as well as spies who successfully performed at least 1 successful tour of duty abroad, veterans who took part in at least 1 victorious battle. The children (up to 18 years old or 26 years old if continuing education), family members and affins (up to the 3rd degree), loved ones and close associates of State Stakeholders are not considered State Stakeholders: they answer for trivial and medium gravity crimes except where there is a written objection from a sponsoring State Stakeholder, or where such a written objection has been stricken down following POLITICAL-JUDICIAL process (not judicial alone), such as via legislative decision or by referendum. When accused of any crime, State Stakeholders (and their affiliates unless objection was stricken down) have the right to trial by referendum for any crime: after the conclusion of the usual judicial process, they have the right to resort to individual public referendum on their case: if they are able to gather a Constitutional Minority of all registered voters, or Simple Majority of expressed votes - in favor of their acquittal, they walk free: even if guilty, unless anyone with legislative initiative under due process of law passes a successful "constitutional dissolution" referendum which suppresses the acquittal: in a constitutional dissolution referendum, voting is public and anyone voting against the proposed measures is saying that the measures are so grave that, if passed "they can no longer form part of the state" - in this case they renounce their citizenship and a constitutional resolution process is initiated, resulting in accommodation of the minority somehow or expulsion of it from citizenship and generally voluntary relocation of it outside state borders.

- Military Prowess. The state must use (part of) the resources under its control (including but not only natural resources) to ensure the military prowess of the state so as to defending from external intervention as well as infiltration and mixed warfare. Its policies should also support a strong military, as well as ensure external security WITHOUT any internal ingerence. Submission to other states (such as suzerainty, allowing "state advisors" giving advice of a mandatory nature, allowing foreign enemy troops on own soil, chaging or attempting to change state laws to adjust them to the desires of the enemy without referendum, etc.) is also forbidden - even where suicidal. Dominance in all its forms, including submission to dominance is forbidden. If the state has factually no choice than to either submit or fight, loose and become exterminated, than it will choose to fight, no matter what - even if defeat and factual extermination are certain. Normal diplomatic

process and policy making are allowed. Strategic alliances are decided by referendum and political process.

- **Libertarian State.** State exists only to (1) ensure external security (including internally from mixed warfare, 'colored revolutions' or such, targeting the libertarian nature of the state); (2) safeguard civil rights and individual liberties and their prevalence internally; (3) achieve the goals of humanity (including monumental works such as space exploration and exploitation, advanced fundamental research, prevalence of communism, etc.). The state is not a family. It should not nor pretend to take care of its citizen to the point of "knowing better than them" or "protecting the community" to the detriment of even 1 citizen's rights. The state does not judge nor "put in balance" the interests of the many against those of the few, nor those of different interest groups. It is not about "all of us getting together and deciding how to live" (and in fact very few deciding how OTHERS should live by Western hegemonic standards). It is an alliance of people which exists solely to safeguard points (1)-(3) for which it is also authorized to dispose of state owned resources and to levy taxes and impose fees, as well as adopt and materialize policies to this end. There must be no obligation to follow or support state policy as a private citizen. In particular: No "due diligence" obligations, no obligations to report crimes (except flagrant violent crimes), etc. The state can in matters of national security or other particularly grave matters impose some requirements, however their fulfillment must fall upon itself: for example, banks cannot be forced to "do due diligence" themselves, however, they may be obligated to report transactions to state and the state can decide if they are permitted or not (the old way) - and where refused, interested parties can contest such decisions in court, or via political process. In fact due diligence in today's Western-block is just imposed by Rothschild and the rest to prevent the few non-affiliated banks and wealthy people and institutions out there from trading with their (the Rothschild's) enemies, particularly in profiting from their (Rothschild and the rest's) decision not to trade with their enemies (who are, by the way, you and me.. the reader and the normally-minded, liberty-loving person, as well as the powerful countries and groups supporting such an ideology).

- **Anything not explicitly forbidden is permitted.** This is a fundamental republican principle. Law by analogy is prohibited. Anything not explicitly and unequivocally banned by law is permitted. That means no person can face legal repercussion for doing anything not prohibited by law (even where it bothers, or gravely harms others). Also, people may NOT break the law to "defend themselves" against some harming them or others without breaking the law. However, the right to do something does not equate to the capability of doing it: people are free to prevent others from doing non-illegal stuff, so long as they do this without breaking the law themselves. Also, "the right to have consensual sex with minors" for example, does not equate that you will be able to find minors willing to have sex with you. If you do however, than no one can prevent it from occurring. Similarly, the "right to bear arms" or use cryptography does not equate an obligation to someone else to sell or provide you with a gun or cryptographic product. He or she however can do this if they so choose. These are called relative rights: you are free do attain them if you succeed to do it, without breaking the law. State security forces are obligated to defend people in such circumstances even if they disagree with their actions or their consequences. People should also be educated to know, exercise and respect both their own rights and those of others. They are free to compete in whatever aspect or way they see fit, so long as they don't break criminal law. Civil rights and individual liberties cannot form the object of any limitation or renunciation. They constitute absolute rights. Any contrary clause is considered unwritten.

- **Prevalence of liberty in practice.** The above principles should not only describe legal "de jure" reality but also practical "de facto" reality. Of course, mild violations can happen, and some more serious ones can occur once in a while, so long as they do not overall diminish or annul the libertarian nature of the society and the state. Finally, again, prevalence "de facto" does not imply an obligation to anyone "to exercise their rights": again, in one perhaps of the more contentious matters: sexually aged minors being allowed to have consensual sex freely as they see fit, does not equate an obligation for them to do so (although it is very likely they will indeed seek to exercise this right): they can act strategically, collude, etc..

- **No Ministry of Truth. Schemas (people) over structures. Facts over statements.** . While the state and the judiciary is tasked with acting scientifically and based on the truth - to the best of its abilities to consider it, holding differing views even when wrong (or most commonly despite that they are in fact right),

must be permitted without restrictions. Also, matters of fact, including principled matters of fact, cannot be relied to as being "already established" as a result of either their being widely promoted as such by the media, by the government, finding themselves stated or adopted as such by state bodies, etc.. Facts prevail. People should also be more concerned about what kind of leaders they endow to lead or be responsible for the activities of certain areas - ESPECIALLY police, prosecutor, judges, commerce registry - rather than insisting on specific separate structures (bodies) or rules to govern such matters. Also, leaders should be deposable by the people whenever the people so consider - most likely because such leaders were or became corrupt, are incompetent, or they changed their stances or behavior: the 1789 (and subsequent) French communist model is good in this regard. Much, much care should be taken to the fact that genuine well-intended and competent leaders and would be leaders (eg. like Mircea Digulescu, Julian Assange, Hugo Chavez, etc.) are likely discredited and frowed up deeply and also made to look incompetent by the adjusting of the enemy activity (increasing it) - while enemy puppets enjoy reduced apparent enemy activity (to make them look good) and so on. The price of freedom is eternal vigilance.

In regard to his envisioned libertarian society, Russia, China, Venezuela, Belarus, the DPRK [North Korea] and Iran, as well as their allies represent the closest match in terms of current foreign policy and to a good extent domestic policies goals. Mircea Digulescu is strongly and firmly against Western, Anglo-saxon or, for that matter, any form of hegemonism and oppression. He is against the Western elite rulers, consisting of the self-proclaimed 'society of the elect' comprising the families of Rothschild, Rockefeller, Murdoch, Soros, Rhodes, [Bill] Gates, Clinton, Bush, [Henry] Ford, Hearst, Zuckerberg, [Andrew] Carnegie, Morgan, Bezos and the other few dozen transnational western evil-doers.

Mircea Digulescu is an Eurosceptic, and supports dissolution of the European Union, supporting Ludovic Orban (Hungary) and Peter Pellegrini (Slovakia) stances on the matter. He salutes the BREXIT and wishes furthermore for UK to exit from under the hegemonic rules of the aforementioned families and become an independent state. He supports Nigel Farage. Mircea Digulescu does not have a significant preference for a US leader, however he does mildly endorse and support Donald Trump as an outsider from the aforementioned hegemonic families. Since Mircea Digulescu aligns with BRICS, CSTO and not at all with the Western Block, he is typically less concerned with internal politics between elites within the latter. He does however salute and endorse the extra-systemic pro-liberty protest movement particularly in Spain and France, as well as more recently in Britain. Mircea Digulescu also supports Palestine and, while in the past favoring a state solution with both Israelis and Palestinians living in peace on the land, recent behavior (2024) of Israel has shown that the grip by Rothschild and the rest on Israel is too deep and its internal and external behavior (genocide in Gaza, Lebanon and assassinations within Iran, Syria and Lebanon - so outside its borders) make a single-state (Palestinian) solution look increasingly like the only realistic viable option internationally. Mircea Digulescu supports Parti Quebecois and Quebec Province secessionism from Canada. He also supports Basque secession from current imperialistic Spain. He does not recognize and condemns as US proxies both Kosovo (Serbia) nor Taiwan (PR China). He recognizes the entirety of the former Ukraine as Russian territory and recognizes and supports Abkhazia and South Ossetia. He recognizes Azerbaijan's suzerainty over Nagorno Karabakh (since 2022 - when both pro-Russian stance of Azerbaijan and pro-Western stance of Armenian ruler Pashinyan become obvious). He does support the desire of the Armenian people to exist as well and advises them to rid themselves of pro-Western rulers and resume friendly ties with Russia for this purpose. In fact, when he visited Armenia in 2021, he [falsely] believed that Armenian administration was pro-Russian [since it was part of CSTO, EEU and his Russian immigration partner had recommended it], a belief supported by the fact a majority of Armenians are indeed pro-Russian. He was also duped to believe that Azerbaijan was anti-Russian - by the emphasis on some projected joint ship building with USA on the Caspian Sea port which didn't materialize. Mircea Digulescu currently also maintains his recognition of Israel as a state, although this recognition is flickering. He condemns and considers US proxies the Daesh terrorists (so called Islamic State or ISIS) [banned in Russia] as well as Chinese Falung-Dong 'movement'. He does NOT recognize Kurdistan and considers current Kurdish 'leaders' in Turkey, Syria and to a large extent in Iraq as US proxies. Mircea Digulescu recognizes and, in the current configuration (anti-Western ally) supports the Taliban movement as legitimate rulers of Afghanistan.

For the avoidance of doubt, Mircea Digulescu unequivocally supports the following world leaders, in this order: Nicolas Maduro [successor to Hugo Chavez] (Venezuela), Xi Jin Ping (China), Vladimir Putin (Russia), Mahmud Ahmadinejad (former president of Iran), Alexandr Lukashenko (Belarus), Kim Jon Un (North Korea) as well as, to a large extent their administrations and their policies, especially foreign policies. Additionally he supports the leaders of friendly nations in general, comprising of BRICS states and opposition leaders as well as non-state actors from non-friendly states who align sufficiently with his views. He also supports Turkish President Recept Erdogan, after the failed US coupe attempt in Turkey and considers him and his administration an ally. He also supports For avoidance of doubt, he also supports Syrian leader Bashar al Assad and his administration.

In terms of thought leaders, Mircea Digulescu supports (in arbitrary order): Peter Joseph (The Zeitgeist Movement) [and does NOT support Jacque Fresco], Nigel Farage (BREXIT Party leader), Edward Snowden, Jullian Assange, Bradley Maning, Greta Thurenberg (after her 2023 pro-Palestine pivot) as well as some others.

In realizing his vision of the world, both conceptually and practically Mircea Digulescu operates the **Better World Project**. See [https://www.matsoft.ro/Matsoft\\_BetterWorldProject62.html](https://www.matsoft.ro/Matsoft_BetterWorldProject62.html).

### **3. Miscellaneous Topics and Preempted FAQ:**

#### **The Permanent Digulescian Authority (ПОВД)**

- Started as a form of humor and self-irony in 2015 and was repicked up as such in 2021. However, in 2021, Mircea thought "what if we really wanted such a virtuous powerful organization to defend basic values and liberties?". how would I shape that.. that's how the Constitutive Act and so on started to form more formally.
- Unfortunately, vacations shortly after initial writings on the matter both in 2015, 2020 and 2021 said their word and polluted the content related to POVVD with various ridiculties and aberrations, some of which have nothing to do with Mircea Digulescu's stance.
- Mircea plans to continue to elaborate on the POVVD writings.. perhaps a bit more seriously.. and, finance and context allowing turn this into a real society. Of course, not believing that "the technical power to change reality anywhere in space or time" was a real, factual, current trait. Nevertheless. Shaping in theory such an organization (and potentially practically if relevant). Communications coming in from someone talking "as if with power" inspire and mobilize. Just like Jesus.
- "Right now", Mircea Digulescu is alone in this "Permanent Digulescian Authority". No other POVVD members. Also, the only activities related to POVVD are the blog posts regarding Constitutive Act and other such.
- Depending on partner and public opinion POVVD may take a more prominent role in a hypothetical shaping of desire future political reality or, if considered too much as "from a vacation" by the relevant persons and some public, it may be relegated to more of a work of fiction. Mircea Digulescu inclines more for the former (a more prominent role). Currently public opinion seems to like more the MatSoft brand.

#### **Early life socializing around Romanian elites, acolytes thereof and masons**

- No clue who these guys are and what their ideological, political and military stances were. In fact, was totally naive as to surroundings before the 2013 information cooperation with Voice of Russia's Valentin Mandrascu. Even post-2013, and sometimes post-2020, Mircea Digulescu sometimes grossly underestimates his own importance and relevance in the eyes of western services and groups, thus

sometimes falsely believing "he is a nobody about whom no one is interested". Other times, exclusively while on vacation he does exaggerate his sense of importance to all groups.

- Mircea Digulescu is not a mason nor a western acolyte. He never received any benefits from masons nor from western imperialists and had only to suffer at their actions and enacted policies. Also, unlike potential appearances sometimes, I do not know a enough – maybe not even all the popular open secrets – about freemasonry, since I myself never accepted "to be made". I do know a few things though.
- George Brailoiu's involvement with MAT SOFT TECHNOLOGY: Geo's infusion of capital was less than I would have made in 1 year at Google. And I did not even direct to myself the entirety of the incoming funds. Overall, true the free time allotted by the move was good for social anti-imperialistic activism purposes, but the 165,000 eur he factually sent over 3-4 years was about the same amount I would have earned in only 1 year of Google work in London (which I was offered in 2011). So I owe him nothing.
- Mircea Digulescu actually published on his blog certain masonic landmarks he discovered via oportunistic information gathering – a fact which senior police in 2022 asked him informally to take down (which he didn't at the time).
- Ultimately, Mircea has, despite his intentions (which were to move to Russia since 2011), lived mostly in Romania. Which is an EU and NATO dog state. Therefore, the most "cultivated" and relevant people here oftentimes happen to be pro-western people. Mircea also does not have "any connections" on the Romanian society.. so he could not generally tell "who is who" when dealing with people. Also, there were no other people to deal with around in Romania. However, Mircea has consistently moved to dealing with friendly nations and peoples including Russia, Iran, China and of course, Venezuela.

### **Working for western IT companies, offers from Amazon and Google**

- Mircea Digulescu interviewed with a number of FAANG companies and received offers from Google London 2011 (150k euro), Google Poland 2021 (again 150k euro) and Amazon Vancouver & Seattle 2018 (210k euro) and Amazon London 2019. However he declined all this offers. He also interviewed with Microsoft Dublin and Facebook London.
- He considers these companies offered a 1<sup>st</sup> class ride to nowhere opposed to a 3<sup>rd</sup> class walk in difficult and dangerous terrain to your destination. Like with Mihai Andritoiu's 10 million EUR offer – yeah.. the money would be good.. but with Mircea continuing on his anti-imperialistic path, not getting stuck in a dead treadmill mid-life situation.
- He interviewed with them for intelligence gathering purposes and also hoping to speculate the "proof" of an offer from these to gain better financial packages in other types of arrangements allowing him to continue his social anti-imperialistic activism.
- He shared these offers with the FSB to highlight that.. being an anti-imperialistic activist does come with sacrificing a potentially comfortable easy life. And also to set the tone on expected potential financial deals which may arise later. Mircea Digulescu aims for between 10k-100k usd equivalent / month for living in Russia fully, allowing him to comfortably take care of himself, some loved one+kids potentially and a few girlfriends – of course, power and security or other substitutes for acquiring these without actual pay count fully. Given his entrepreneurial orientation he could make even more with his companies and endeavors.
- No idea the Hearst family were famous billionaires. Only begun to suspect as a result of FSB interaction in July 2020.
- Finally, this is what gives in EU, colleagues. Mircea Digulescu has asked for financing from Russia in the past but was politely declined. What was he to do to finance his activism?

- Consider also that Stalin himself worked in a Rockefeller factory when he was young, before finding better ways to finance himself.
- **Mircea Digulescu is not a Western spy, acolyte or anything of the sort. He is anti-Western pro-liberty social activist.**

**Hypothesis that if Mircea Digulescu was truly anti-Western, having lived so much in the West, he would have been dead or arrested already by now**

- Mircea Digulescu has in fact been subject to death threats, intimidation attempts, politically motivated persecution (including getting Assanged in Germany in 2023) and other strange happenings as detailed in this document priory.
- The fact some relatives of Mircea Digulescu (father, distant uncle) are somewhat deep within the Romanian state and masons, it is possible that, despite their own will, Mircea was in the past spared more drastic measures, having been falsely considered a low risk, because the mason-like leaders did not want others to think like "what if this happens to my child?.. will you kill him also?..".
- Mircea Digulescu is very smart. He has a significantly above average intellect, and, despite his technical inclination and lack of formal military or political training, he has proven apt to solve many real life problems for himself: getting some money, getting girls, staying alive, etc. . This was simply done by applying his smarts to real world undelimited problems – as well as a good dose of luck: fate it seams does take care of fools, drunks and ships.
- For those whom only Mircea Digulescu's death at the West's hands would convince them, I doubt even this event would actually convince them in retrospect if it does happen – they would probably just "rationalize it away" as mere independent coincidence. Finally, if no action is taken soon in terms of Mircea Digulescu's safety, given his plans, such an event is probable to occur also.

#### **4. Conclusion and Call for Action**

Mircea Digulescu is a sophisticated, elite intellectual, entrepreneur and libertarian political activist seeking to relocate to Russia and live there because of his rejection of Western values and social-cultural norms and concrete practices and his embracement of Russian ones. He plans to set up a (number of) startups in Russia, mainly in IT, computer science and related fields, but also in Communications and Finance. Additionally he plans to engage in Scientific activity, and either collaborate with a local University or, why not, in the future found a new such University himself. Additionally, if there will be interest from the relevant authorities, Mircea wants to involve himself in the war effort, mainly in terms of strategy, war planning, military-industrial complex development and consultancy support for military leaders, including in war zones (including West of the Dnper river).

Ultimately, if in approximately two years he finds no suitable and just place in Russian society, he will, over the next year, find an adequate alternative relocation and continue to pursue his endeavors there. Such viable alternative locations are in People's Republic of China, the Bolivarian Republic of Venezuela, the DPRK, Turkey, the Syrian Arab Republic, potentially the Islamic Republic of Iran, Uganda, the United Arab Emirates and ultimately Dubai. However, he wants to stay in Russia as the most fit location from both sides considering and the most effective place for his political, scientific and personal endeavors. He also needs the safe harbor for at least 2 years to be able to adequately relation with and find partners and sponsors for longer term plans – both in Russia and abroad.

As such, he kindly asks that he be granted Russian visa and respectively Russian residence. Thank you!
